

# **Hands-on Chatbots with Google Dialogflow**

# Course Outline

## Module 1: The Big Picture

**Bots, DialogFlow**

Voice and free-flowing chat

## Module 3: Dialogs in DialogFlow

**Linear & Non-linear Dialogs**

Managing conversation flow

## Module 2: Interaction models in ChatBots

**Agents, Intents, Entities, Contexts**

The Building Blocks of DialogFlow

## Module 4: Fulfillment & Deployment

**Webhooks & Integrations**

External APIs for fulfillment & Deploying DialogFlow apps

# Overview

Machine learning has made possible bots which can conduct intelligent conversations

Technologies underlying bots are complex but platforms make building these bots simple

Google's Dialogflow (formerly api.ai) offers an easy way to build sophisticated chatbots

**Where Would You Use Chatbots?**

A chatbot is a program that can conduct an  
**intelligent** conversation

Convincingly simulate human behavior and  
pass the **Turing** test

# Help Navigating a Site

Can't find what you're  
looking for?

Chat window pops up - just  
ask questions!

# Help Navigating a Site

Chat is usually powered by a  
bot

# Customer Support for Your Order

Order not received from your  
favorite e-commerce site?

Call customer support on the  
phone

# Customer Support for Your Order

Order not received from your favorite e-commerce site?

Chat on the site, track your order using an intelligent bot

# Chatbots for Business

Weather bot

Grocery bot

News bot

Personal finance bot

Shopping bot

# Introducing Dialogflow

# Types of Chatbots

## Rule Based

Basic, know only about rules that have been pre-programmed

## AI Based

Intelligent, learns from conversations using ML techniques

# Types of Chatbots

## Rule Based

Basic, know only about rules that have been pre-programmed

## AI Based

Intelligent, learns from conversations using ML techniques

# A Little History

**2011:** Speaktoit developed an intelligent personal assistant for mobile phones

**2014:** Speaktoit released api.ai to third party developers

**2016:** Google buys Speaktoit to power Google Assistant

**2017:** api.ai is renamed to Dialogflow

# Dialogflow is Sophisticated

Build natural, rich conversations with an intuitive UI

Uses machine learning to understand what users are saying

Each ML model is unique to an individual user's bot

# Dialogflow is Cutting Edge

Supports 14+ languages

Develop in 16 programming languages

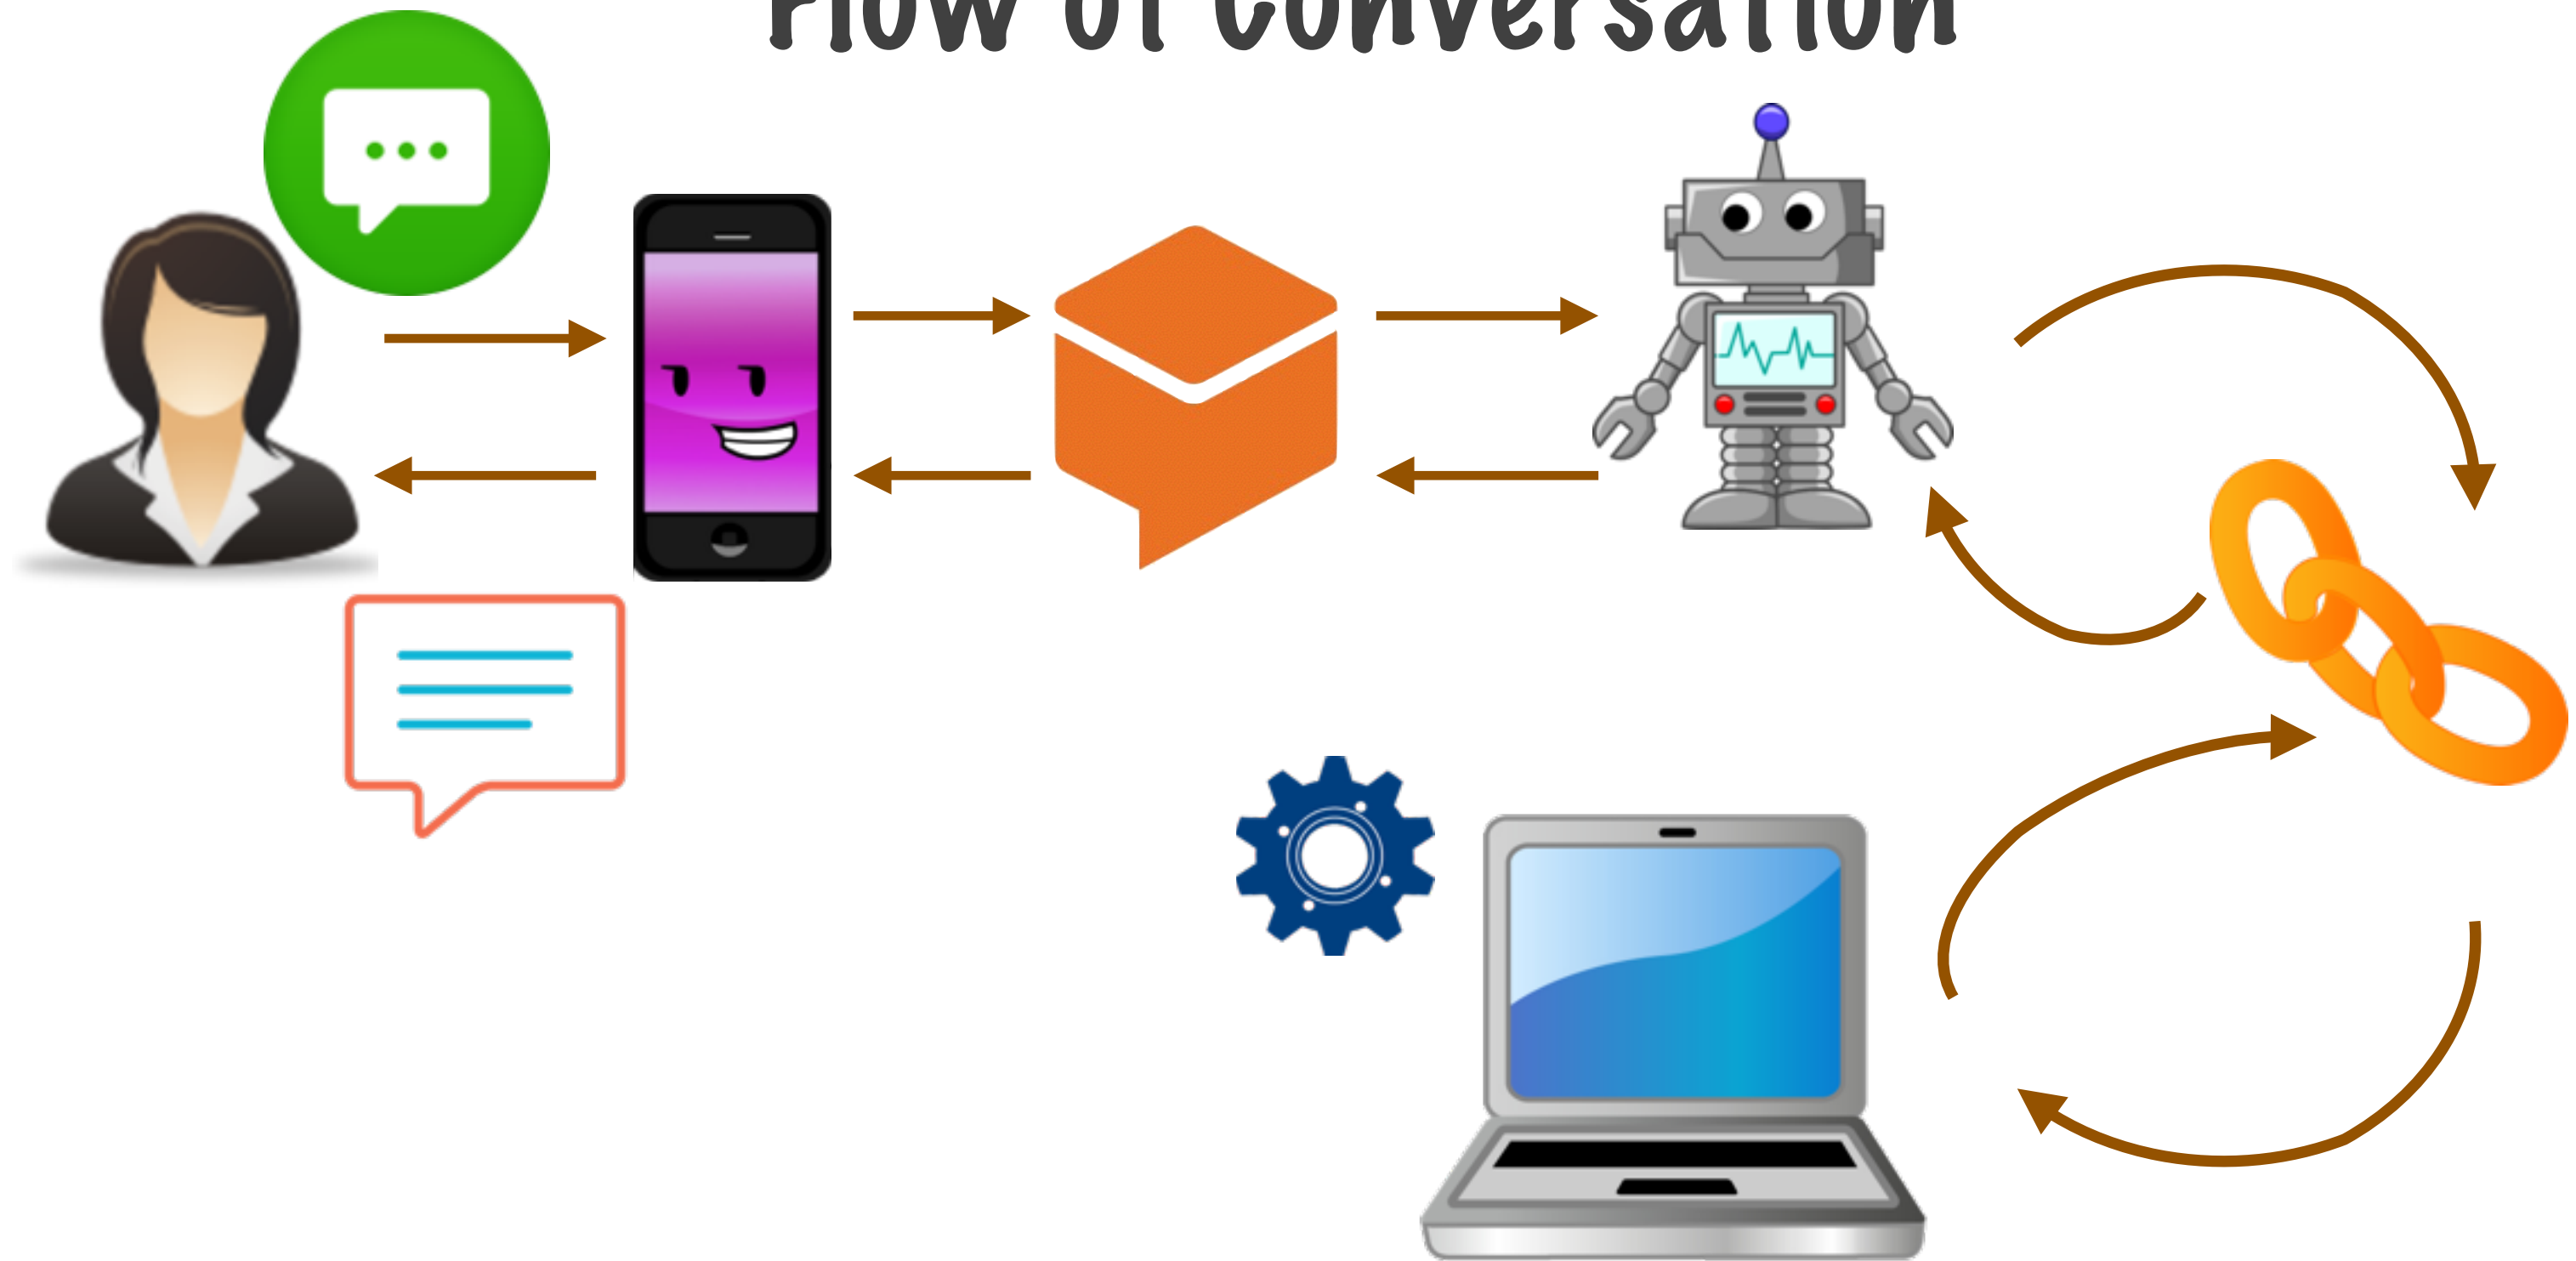

SDKs to work with web apps, mobile apps and wearables

Integrates with 14 major chat platforms such as Slack, Cortana, Alexa, Facebook etc

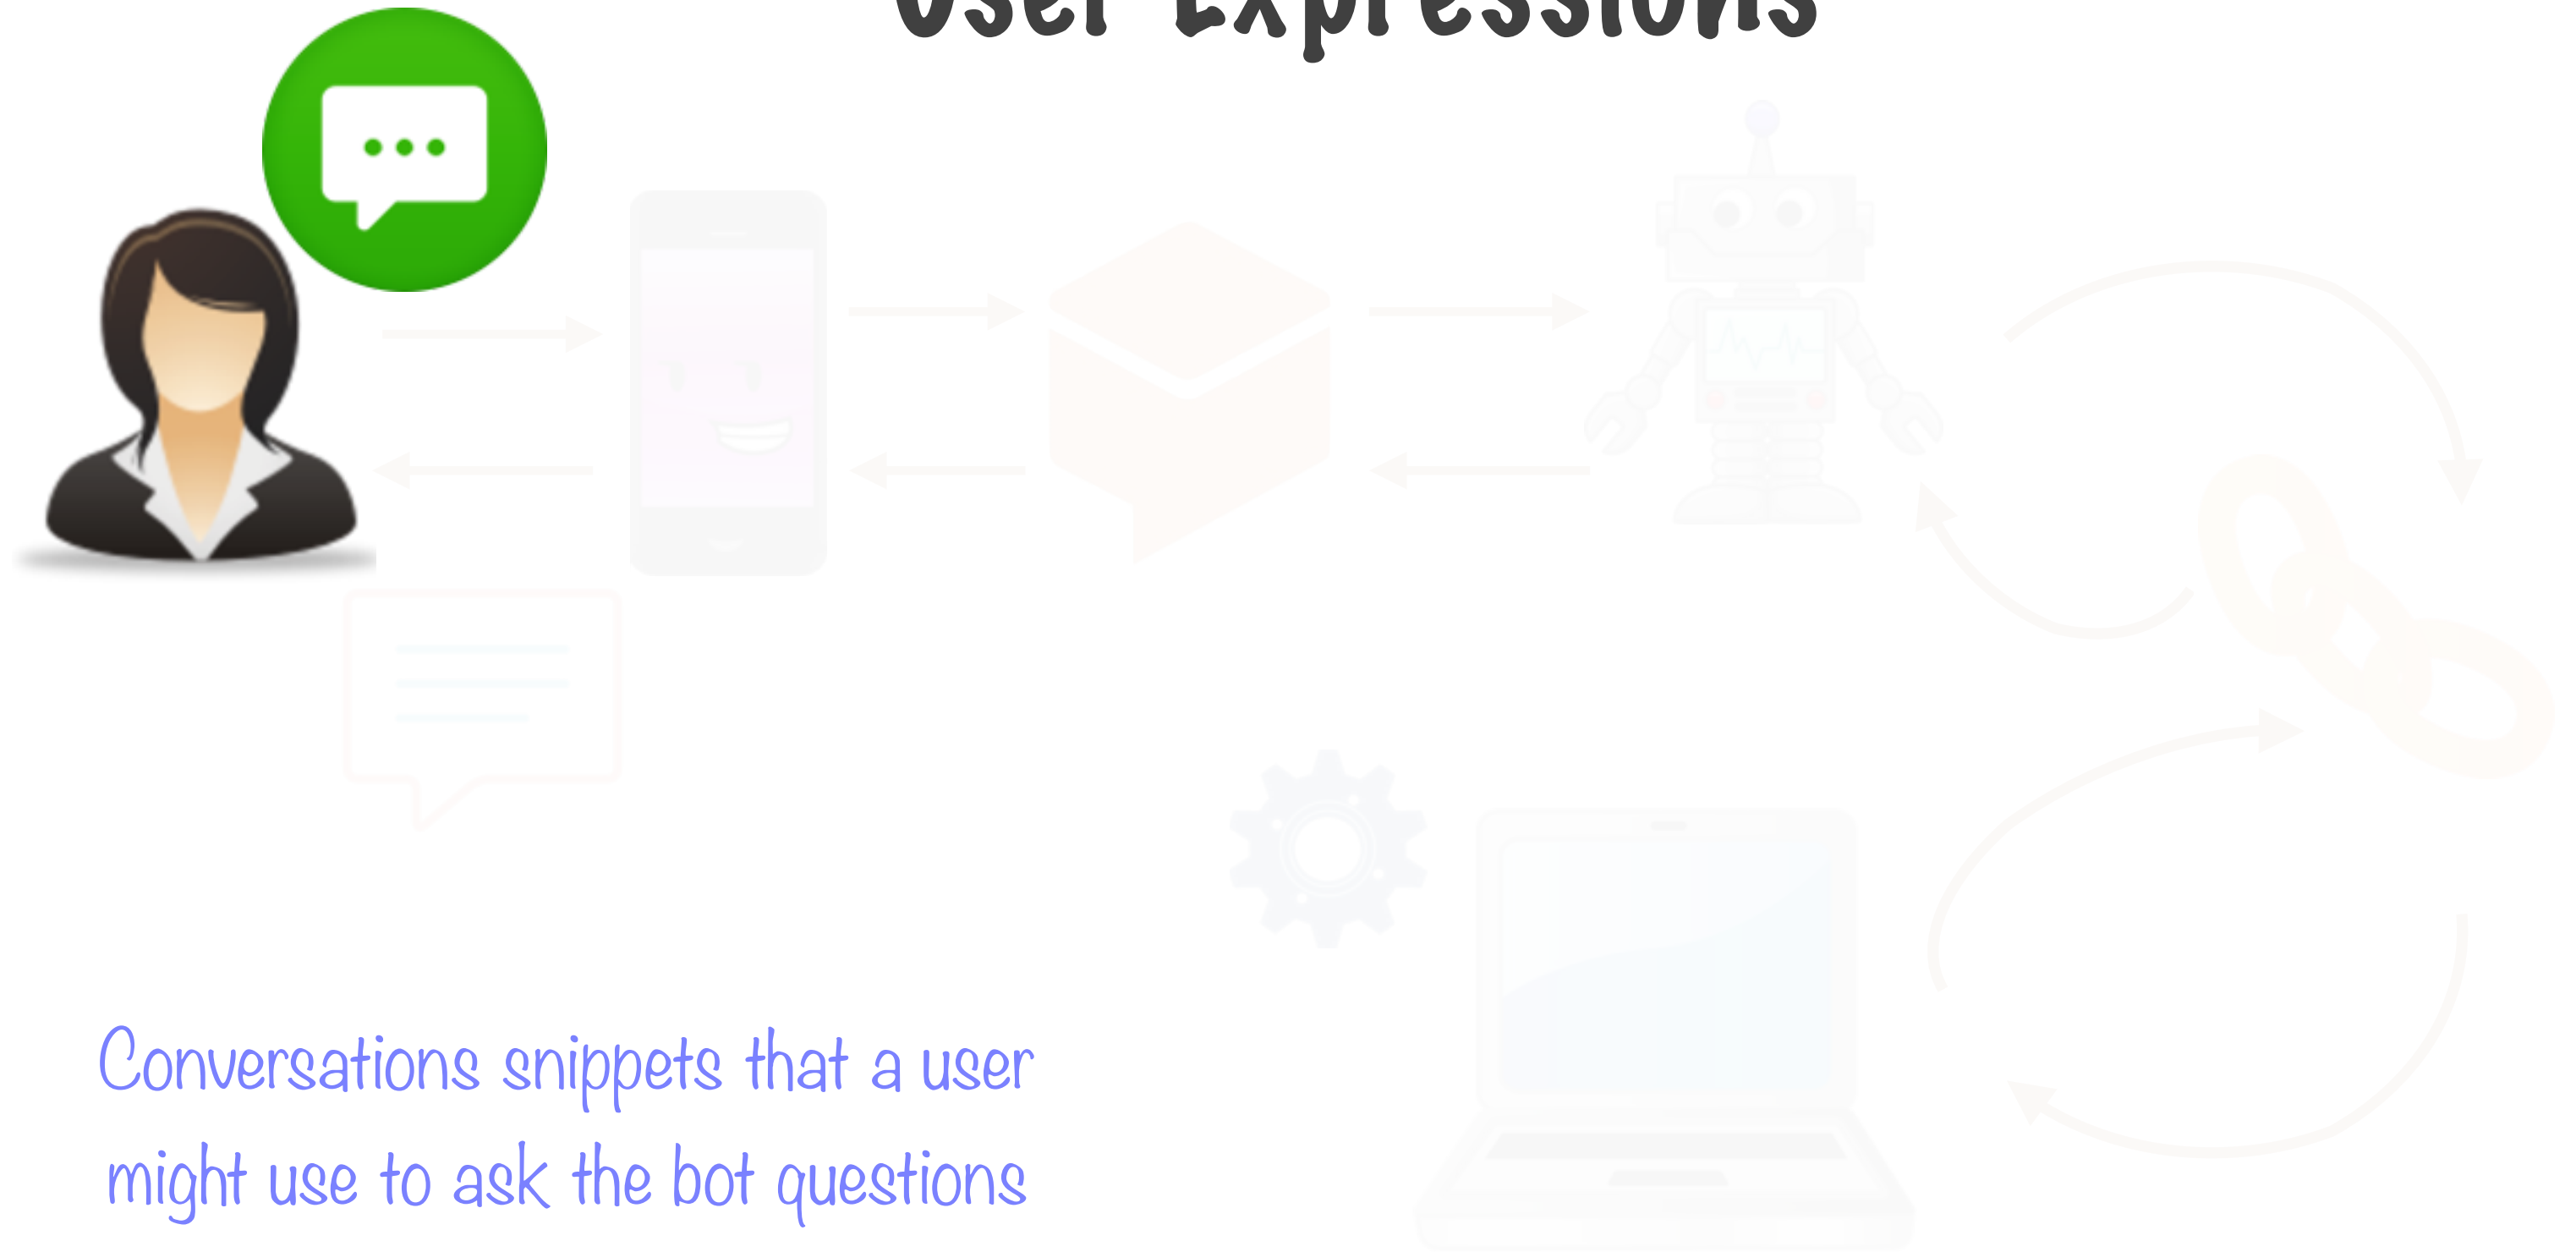

# The Big Picture

# Flow of Conversation

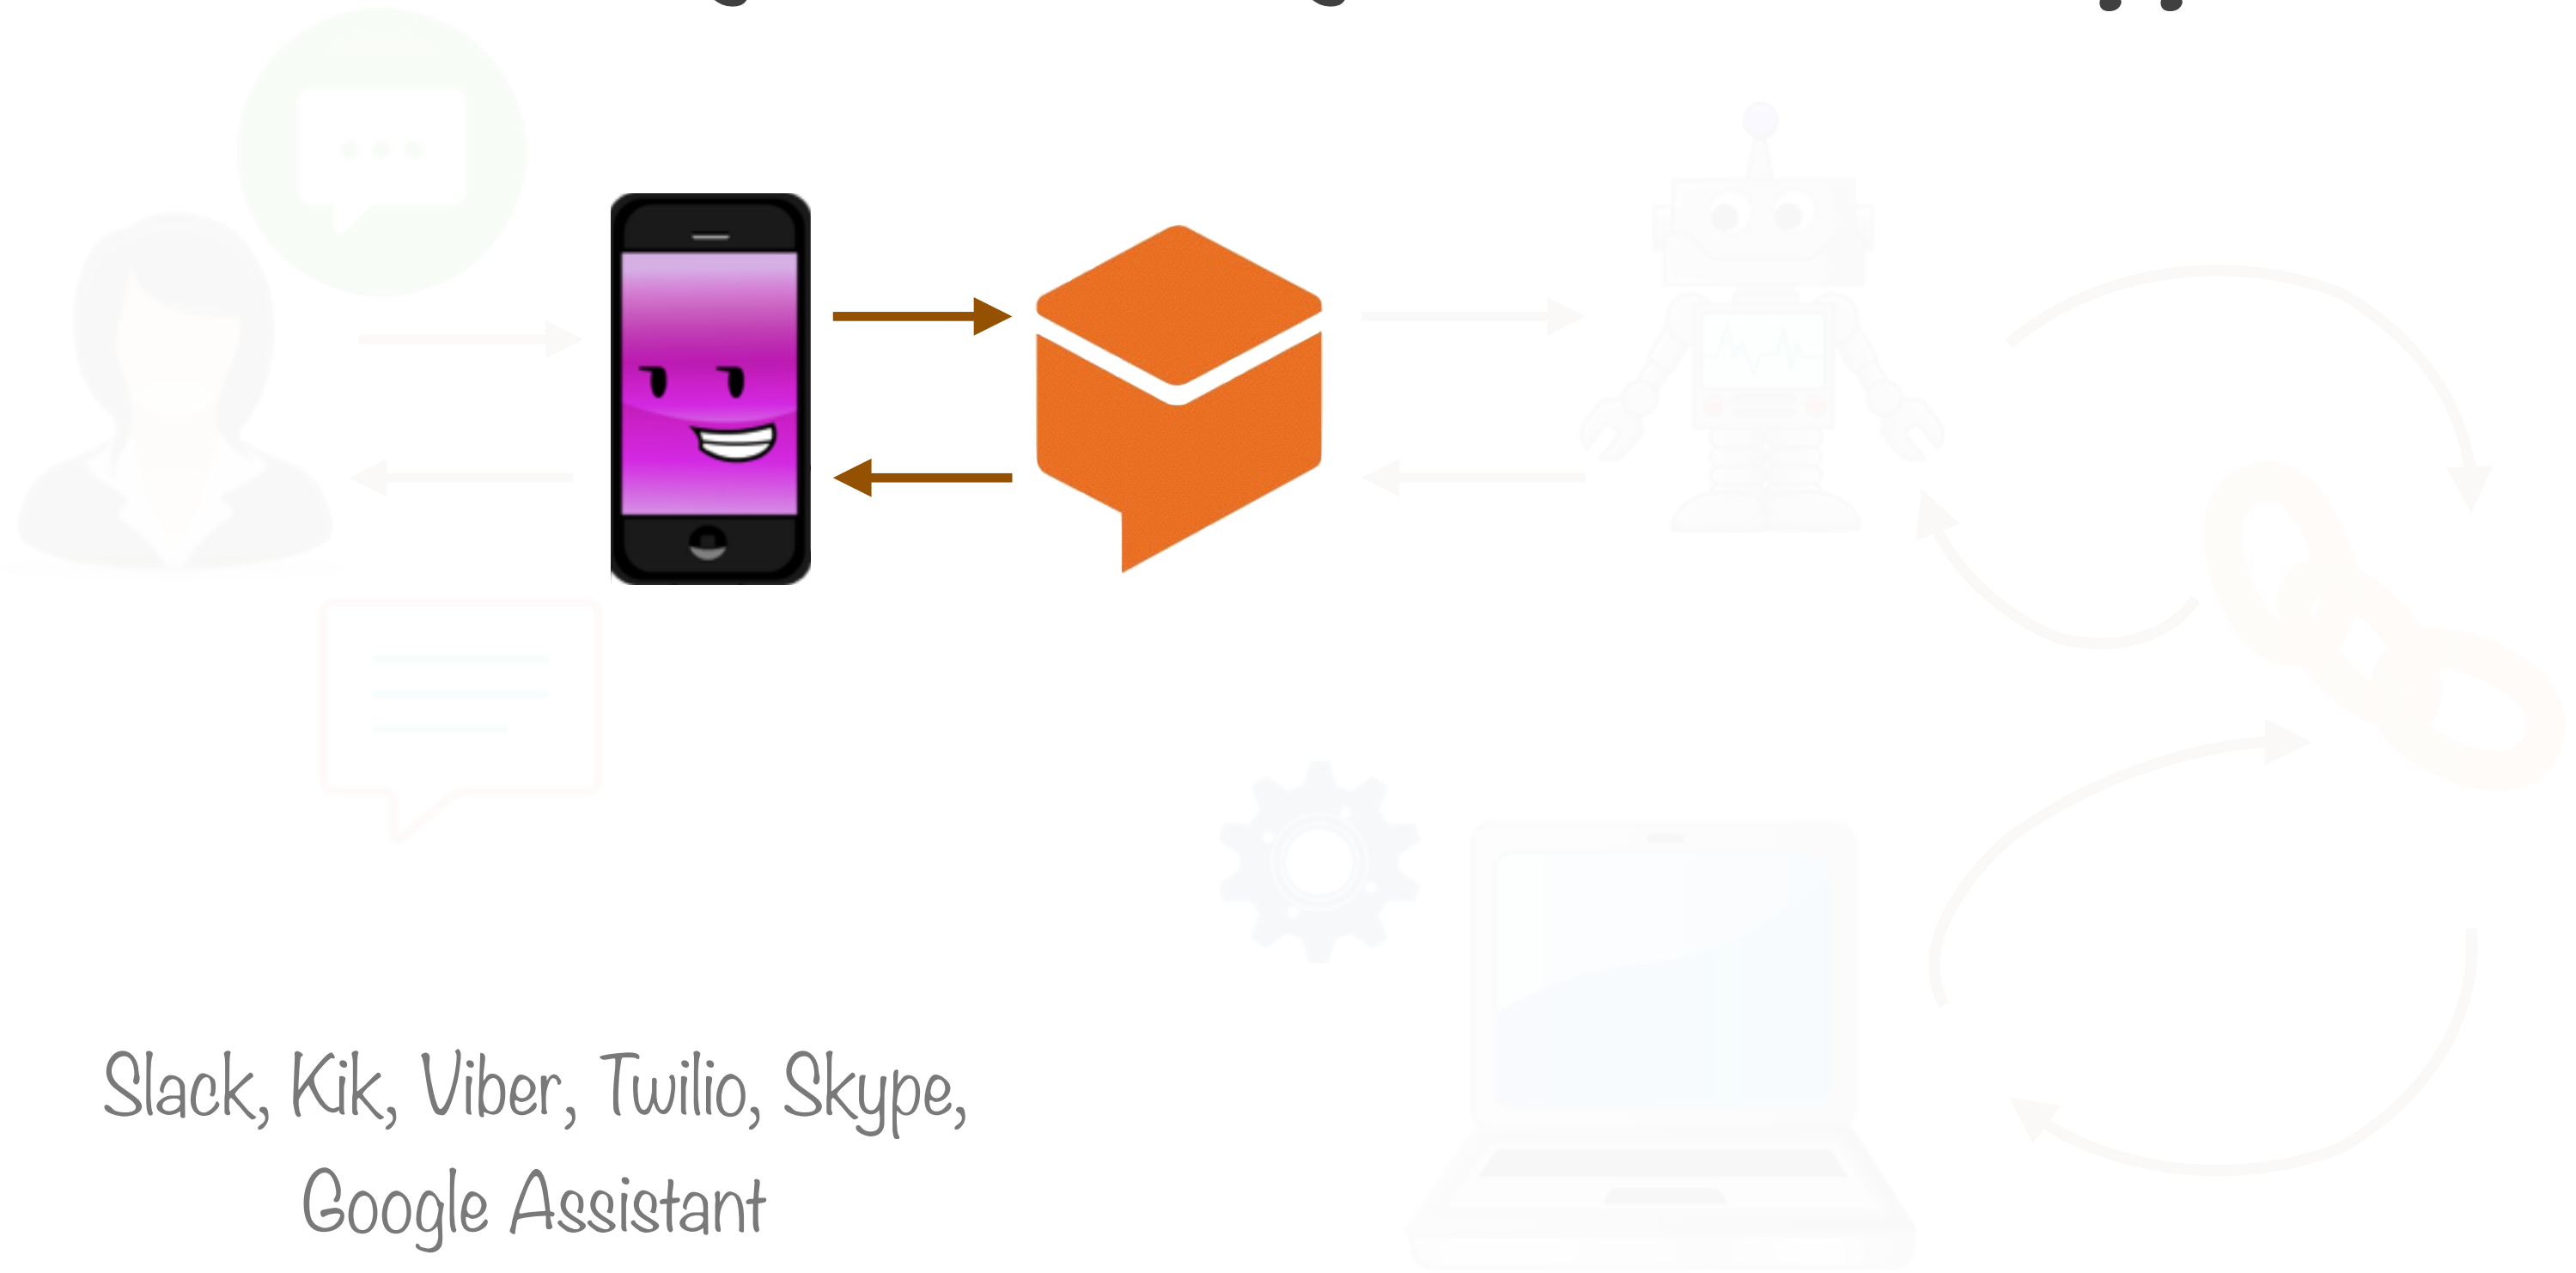

# User Expressions

Conversations snippets that a user might use to ask the bot questions

# Dialogflow Integrated with Apps

# Agent

A module which incorporates Natural Language Processing to understand what the user meant

# Agent

# Intent

Maps user requests to an  
intent

# Intent

The intent determines action  
taken by code

# Fulfillment

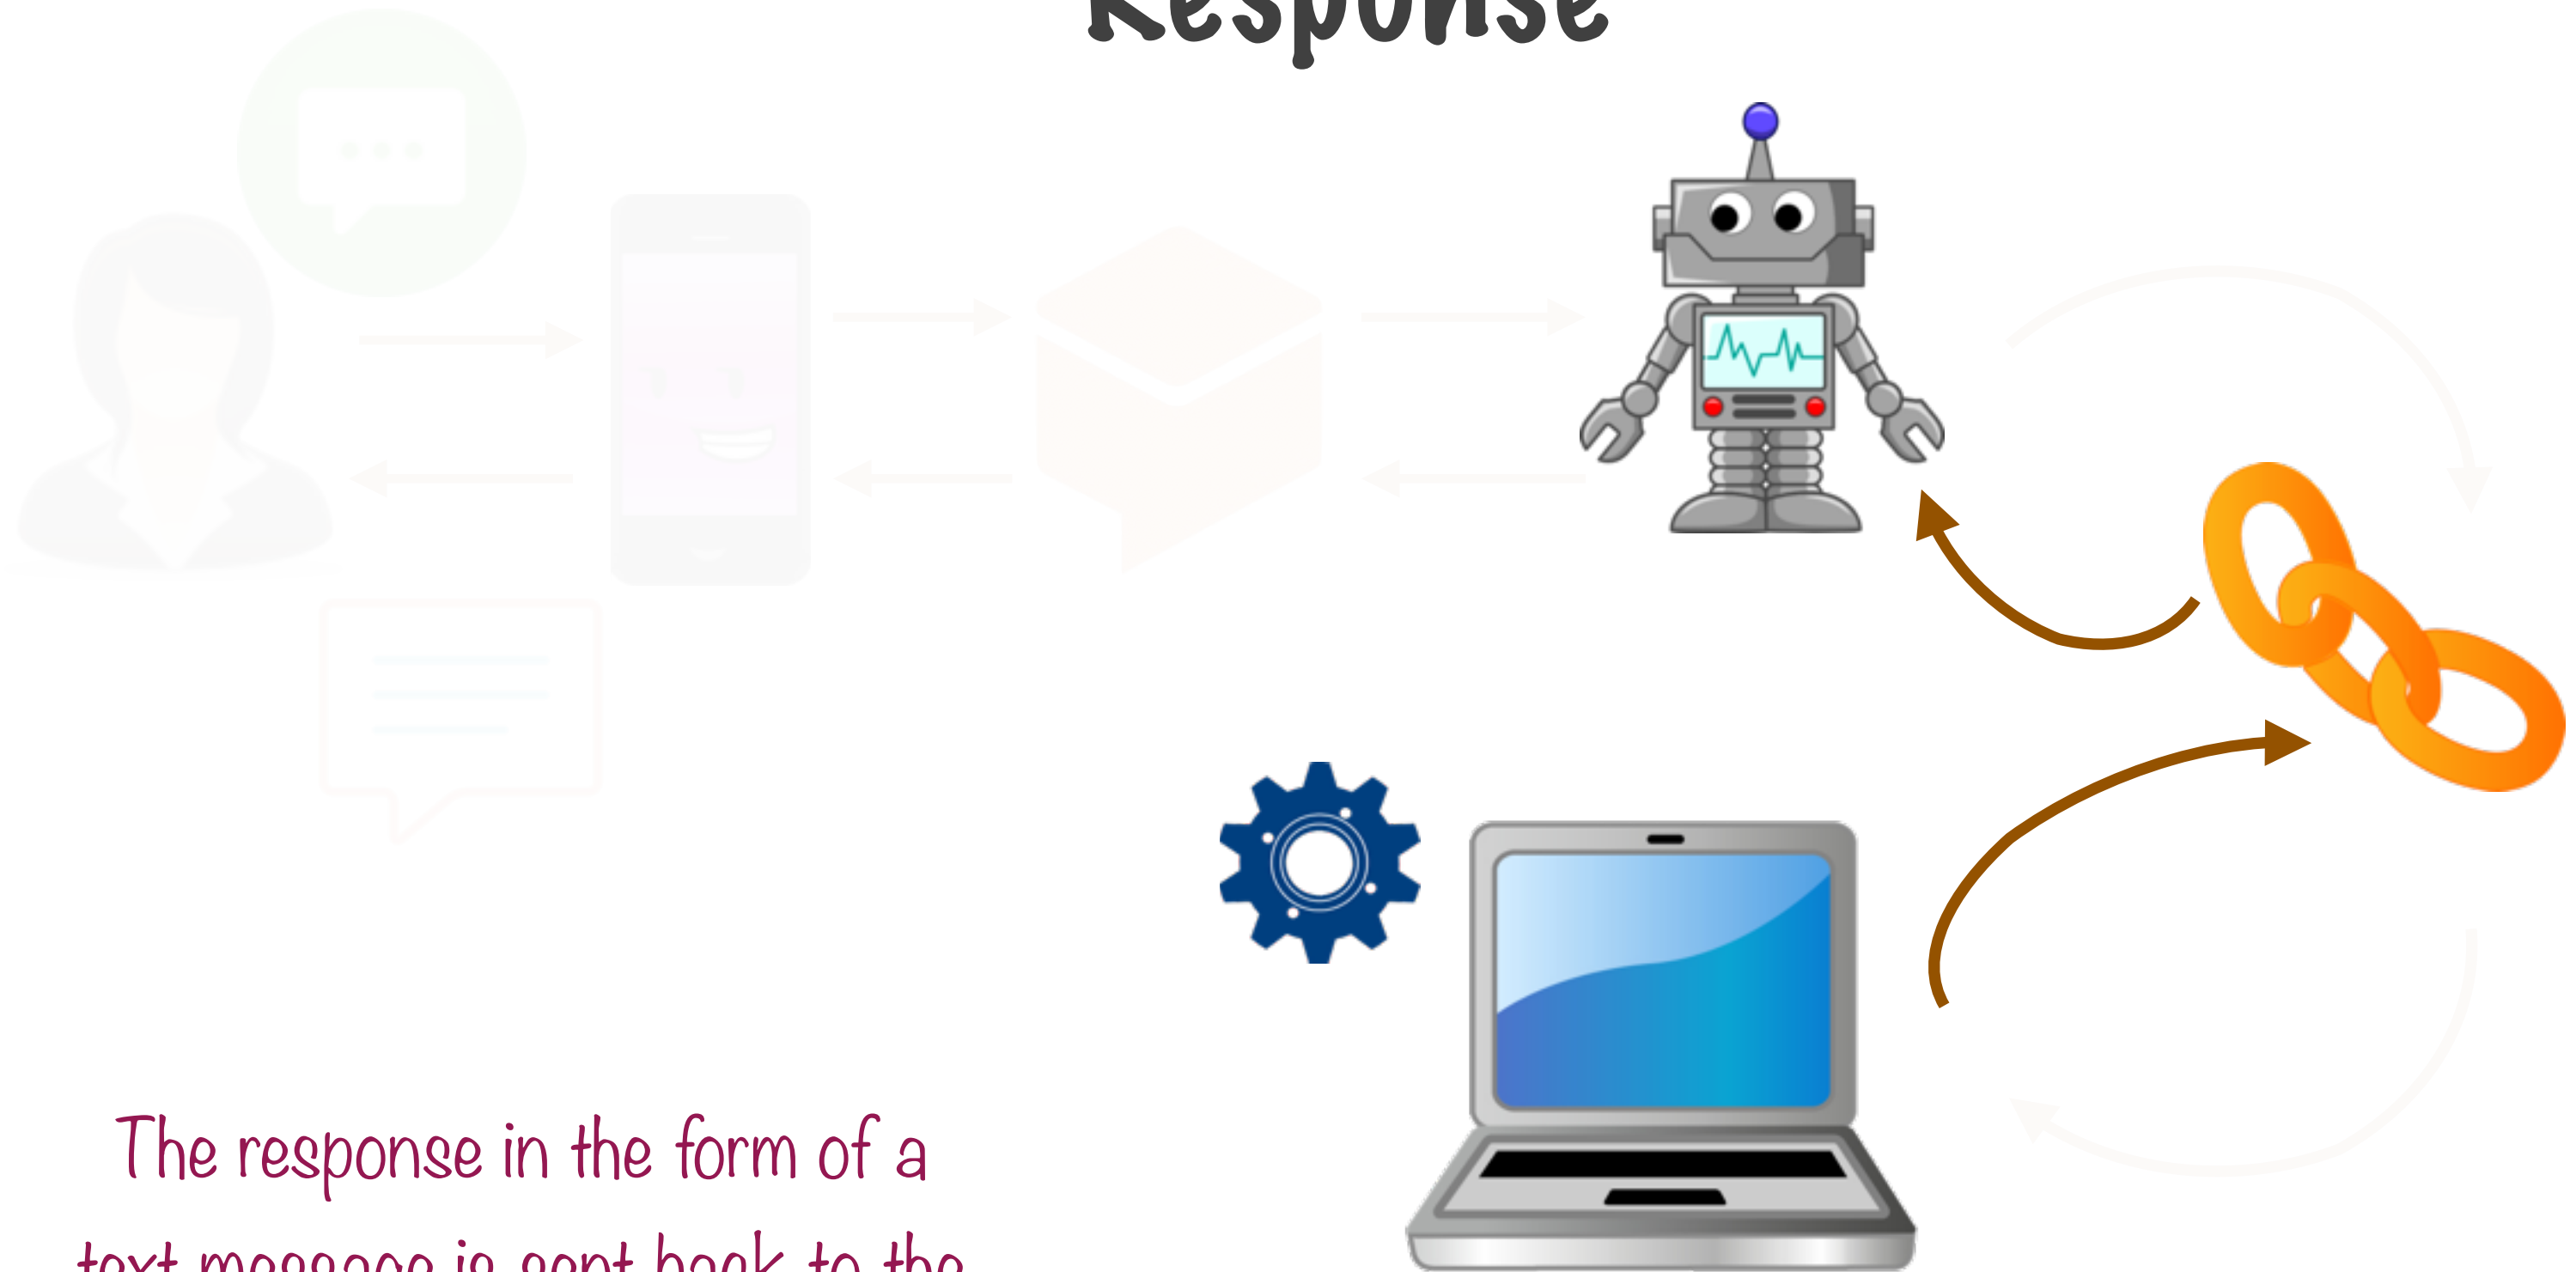

# Response

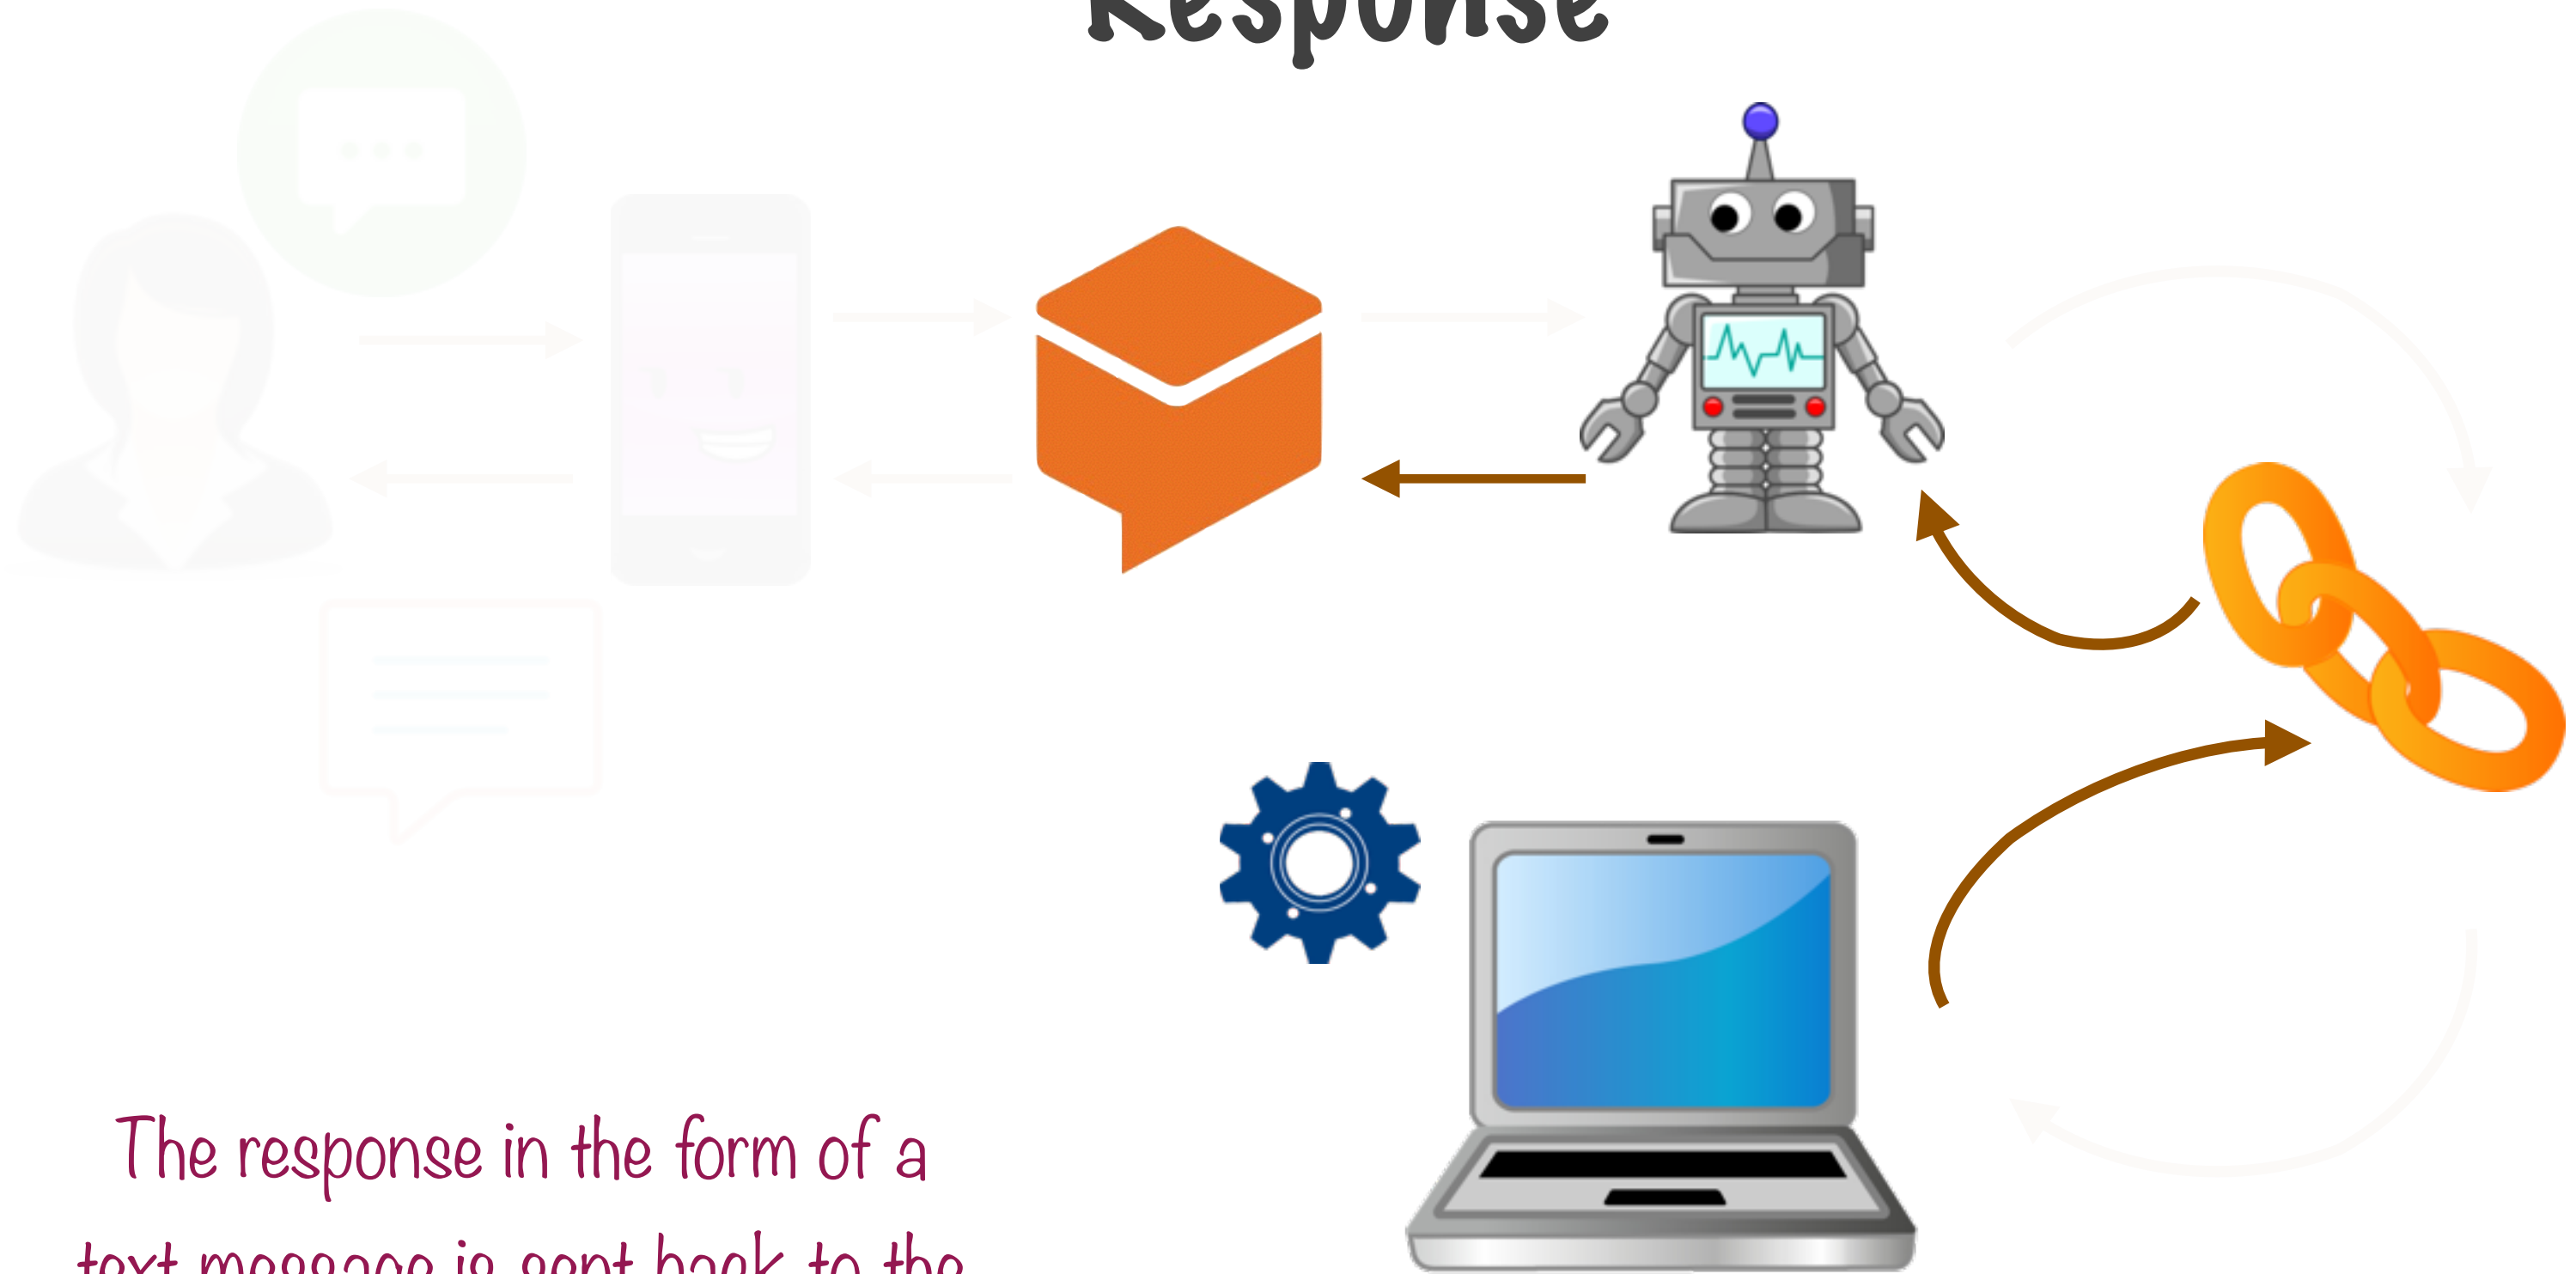

The response in the form of a text message is sent back to the user

# Response

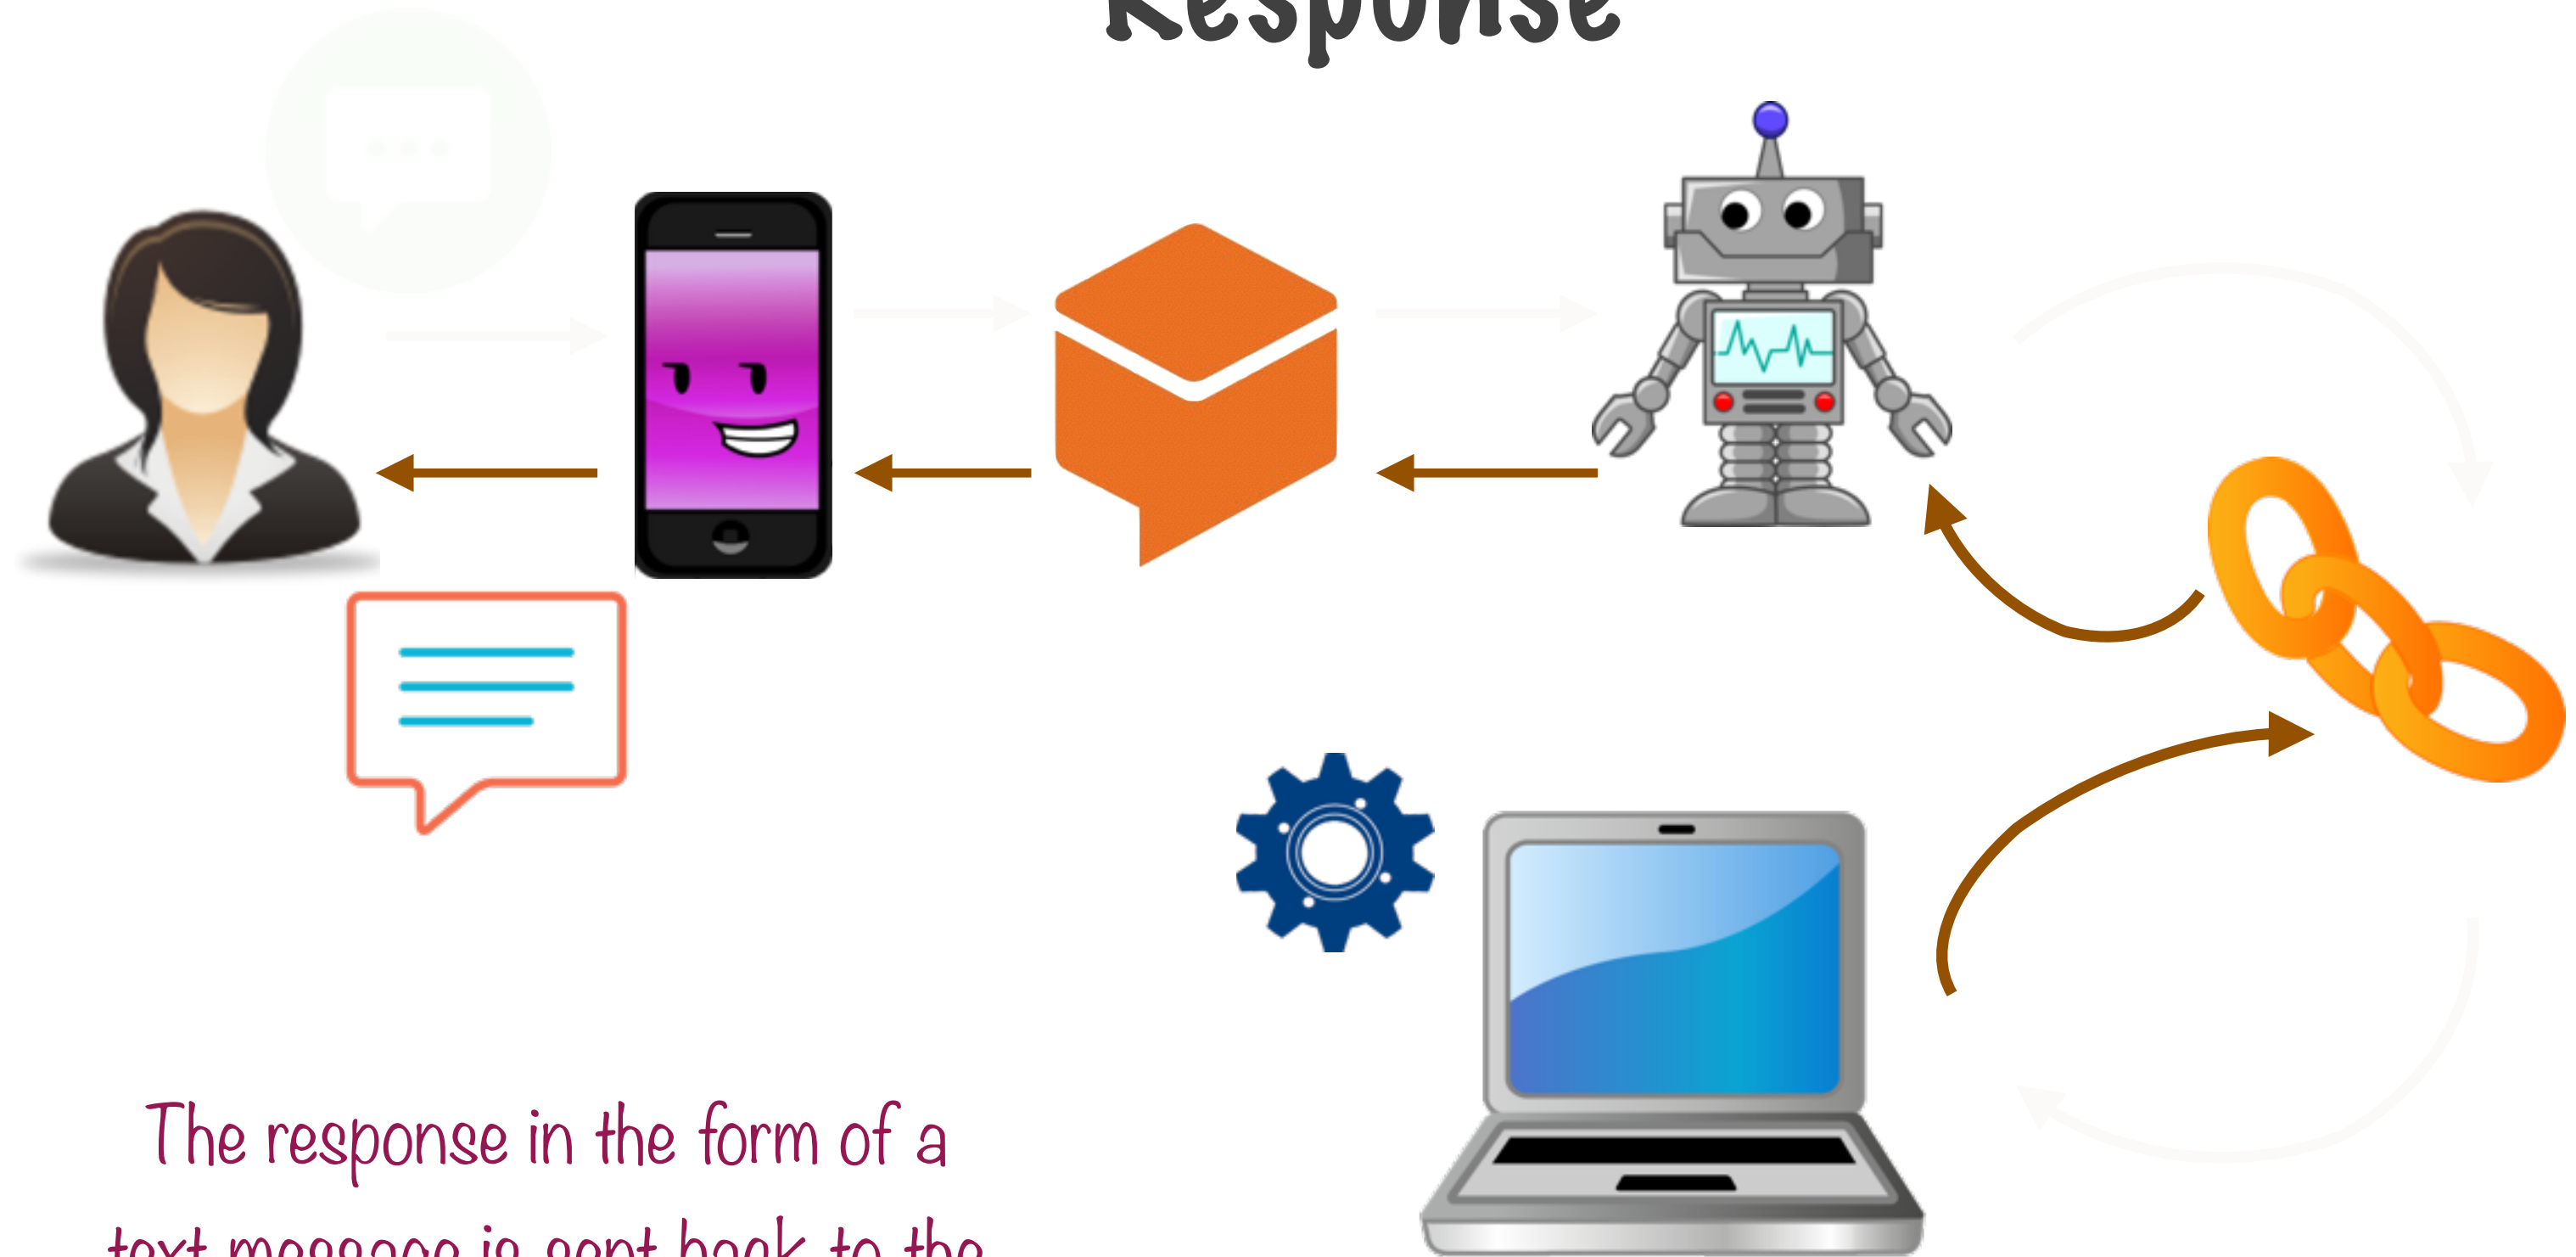

The response in the form of a text message is sent back to the user

# Response

The response in the form of a  
text message is sent back to the  
user

# Response

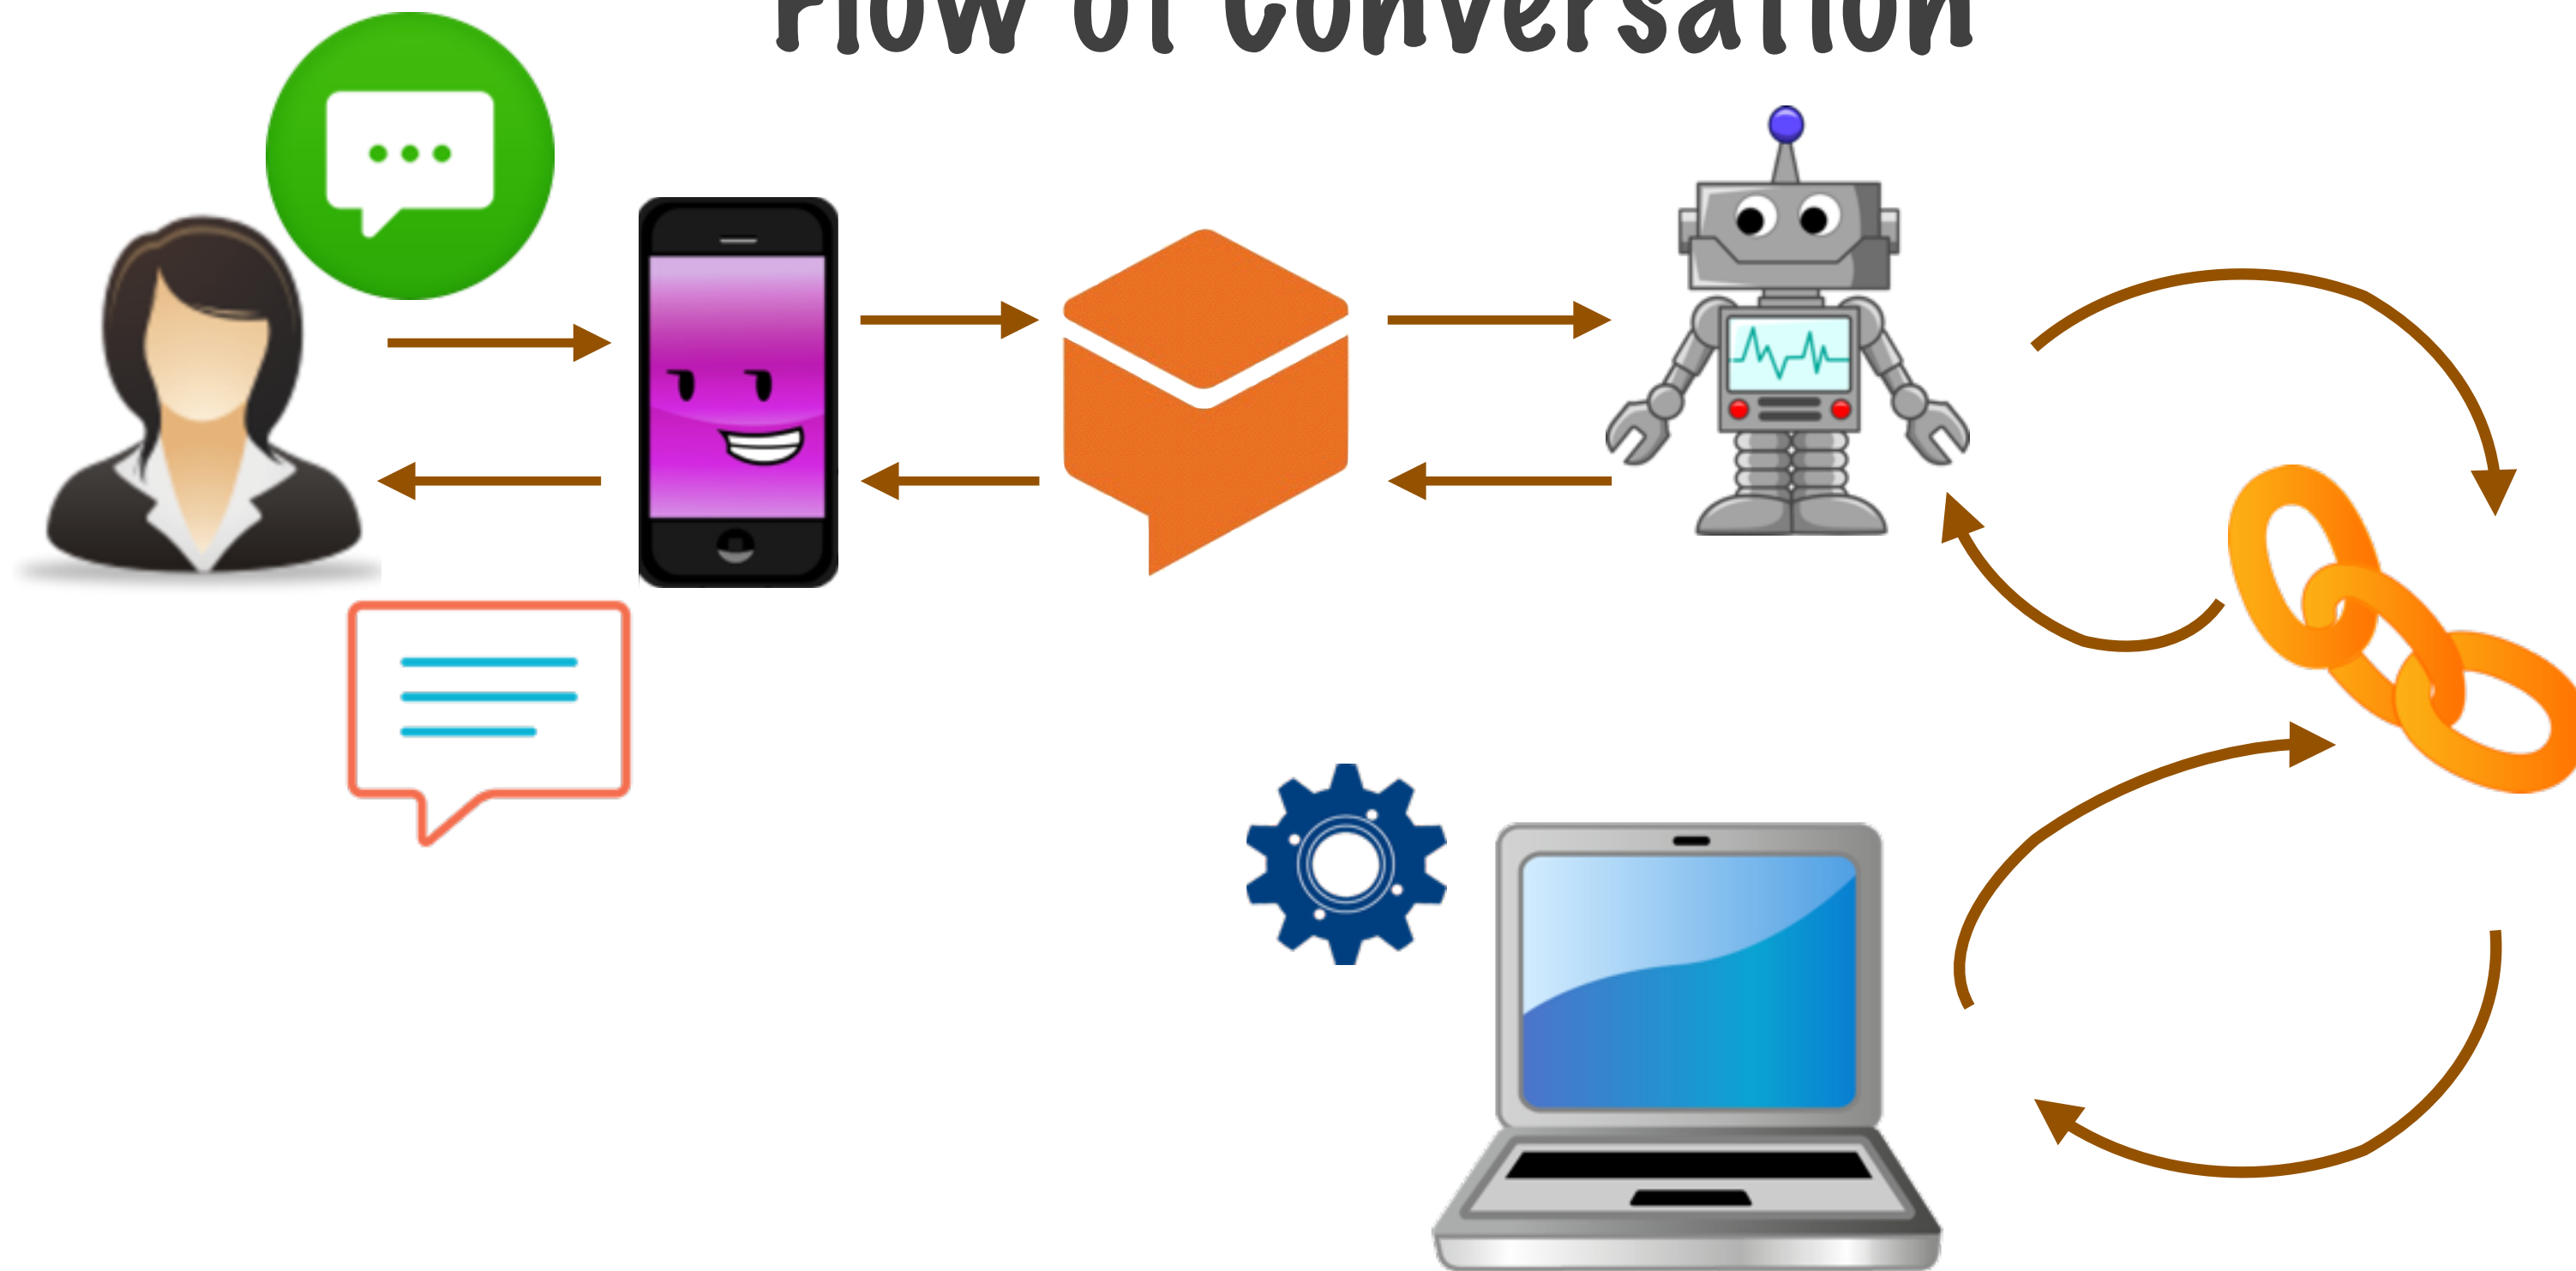

The response in the form of a  
text message is sent back to the  
user

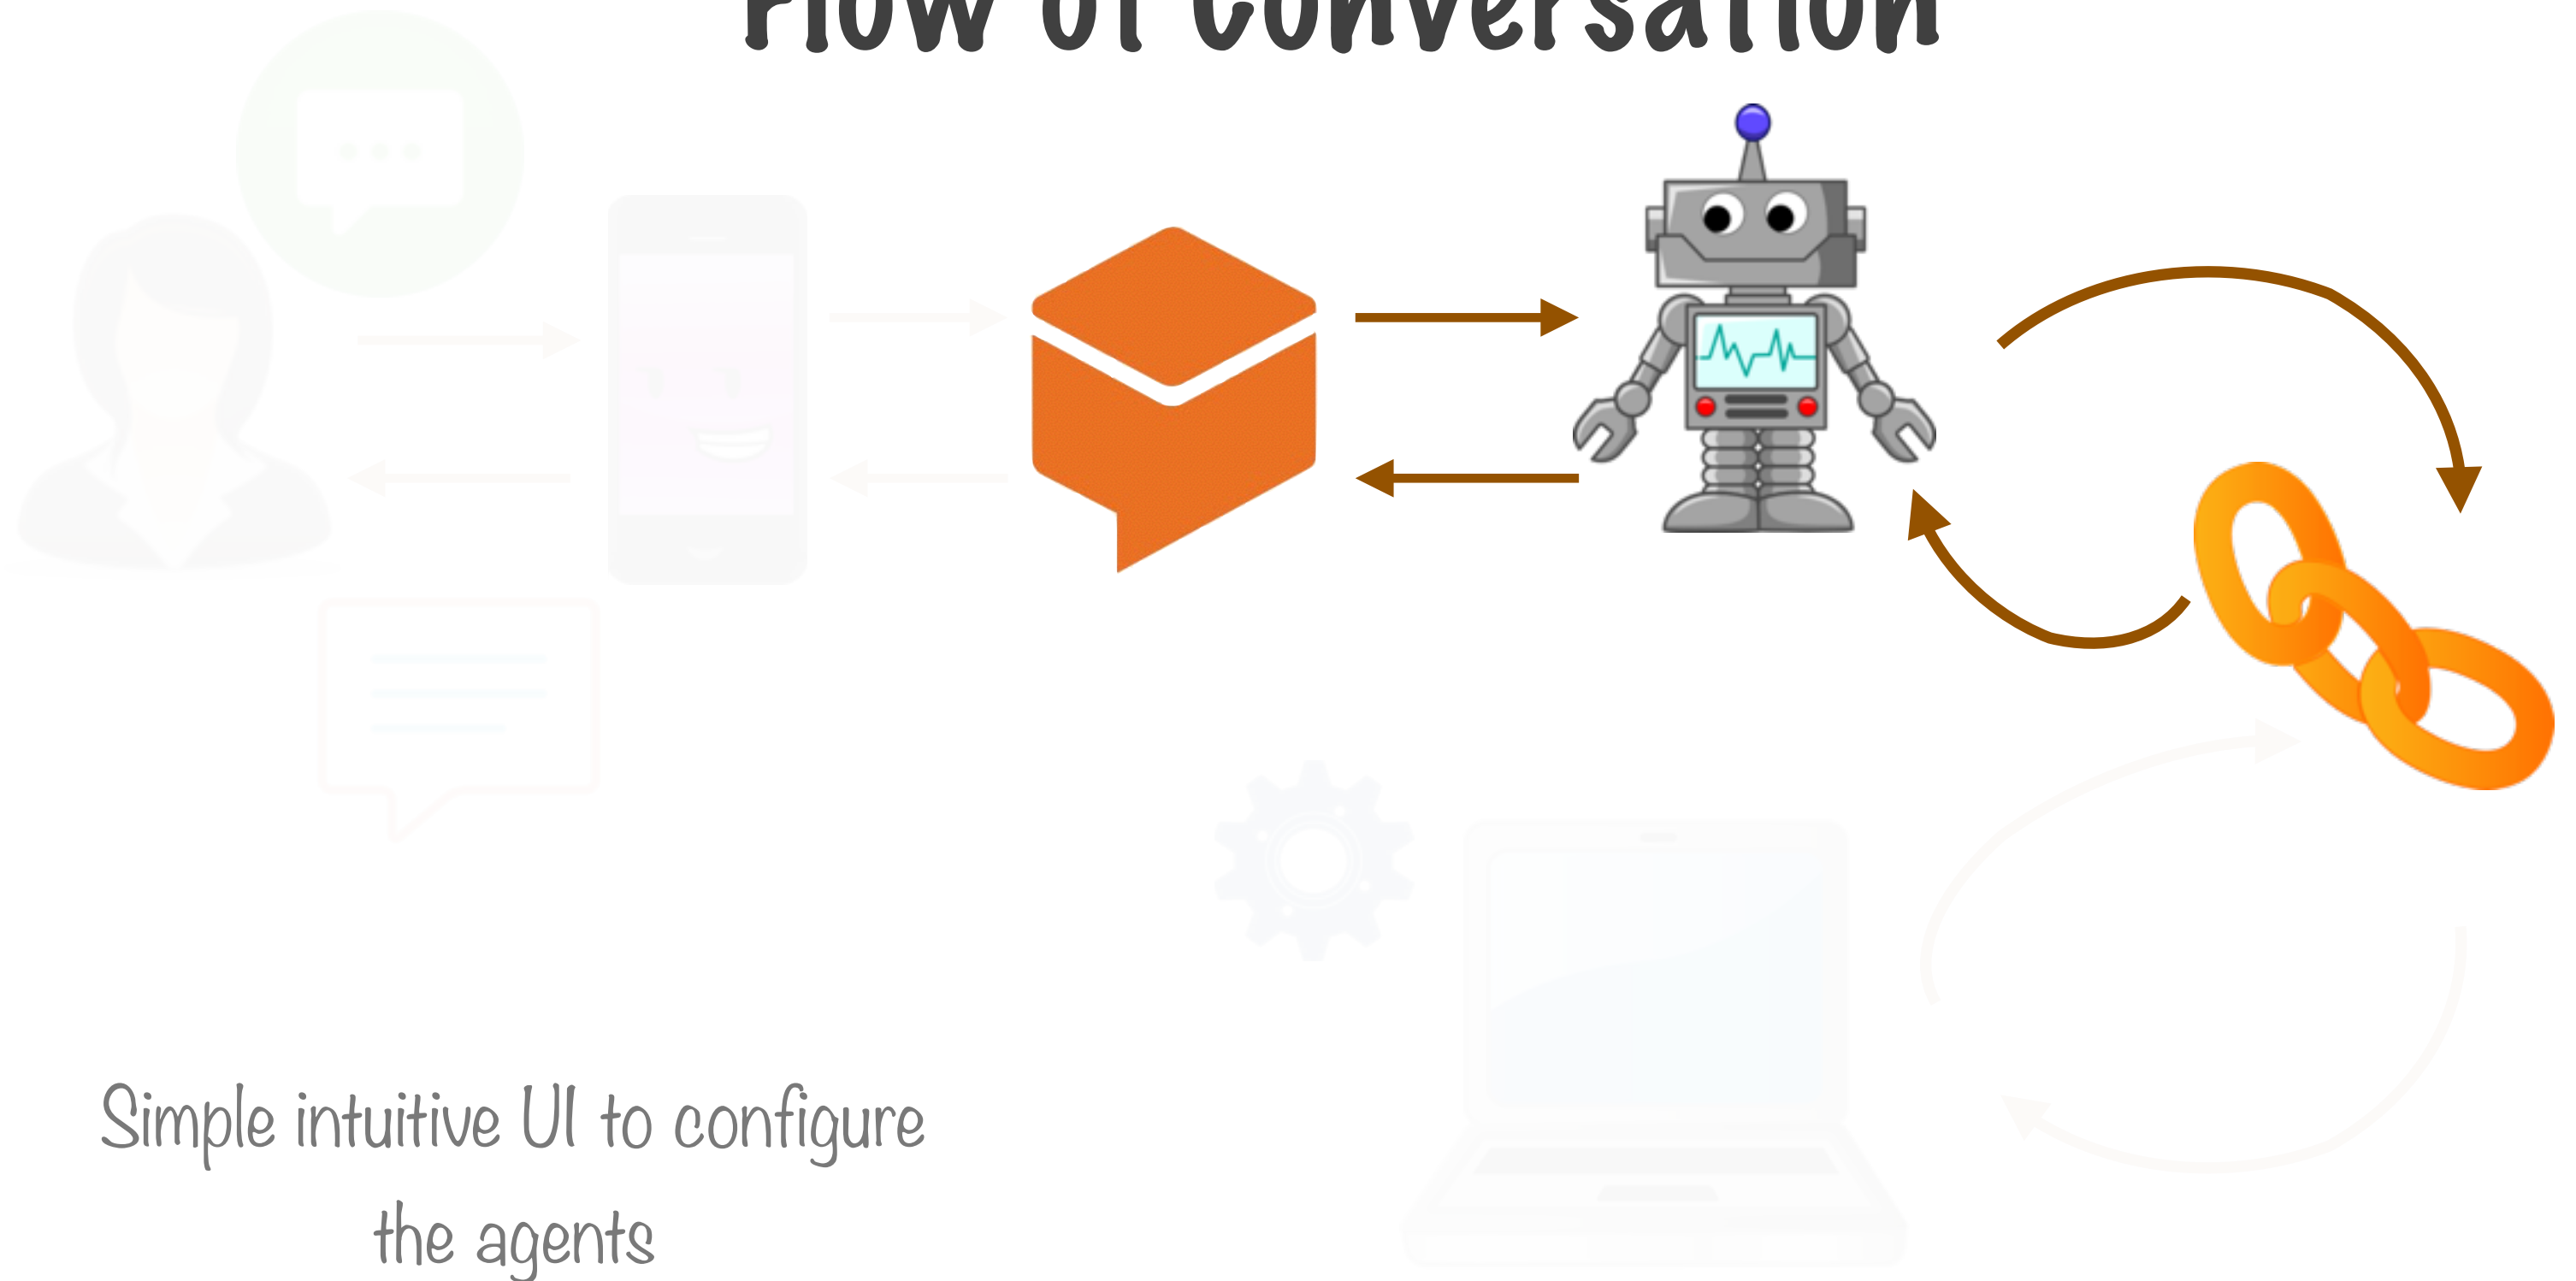

# Flow of Conversation

# Flow of Conversation

# Flow of Conversation

# Flow of Conversation

Only write code for fulfillment

# Using the Building Blocks of Chatbots

# Building a chatbot using DialogFlow

## Create Agent

Custom or pre-existing sample

TripPlanner

## Define Entities

Entities are user parameters

sedan or hatchback? suite or single?

## Specify Intents

Intents are actions user wishes to accomplish

Welcome, Fallback, BookCars, BookRooms

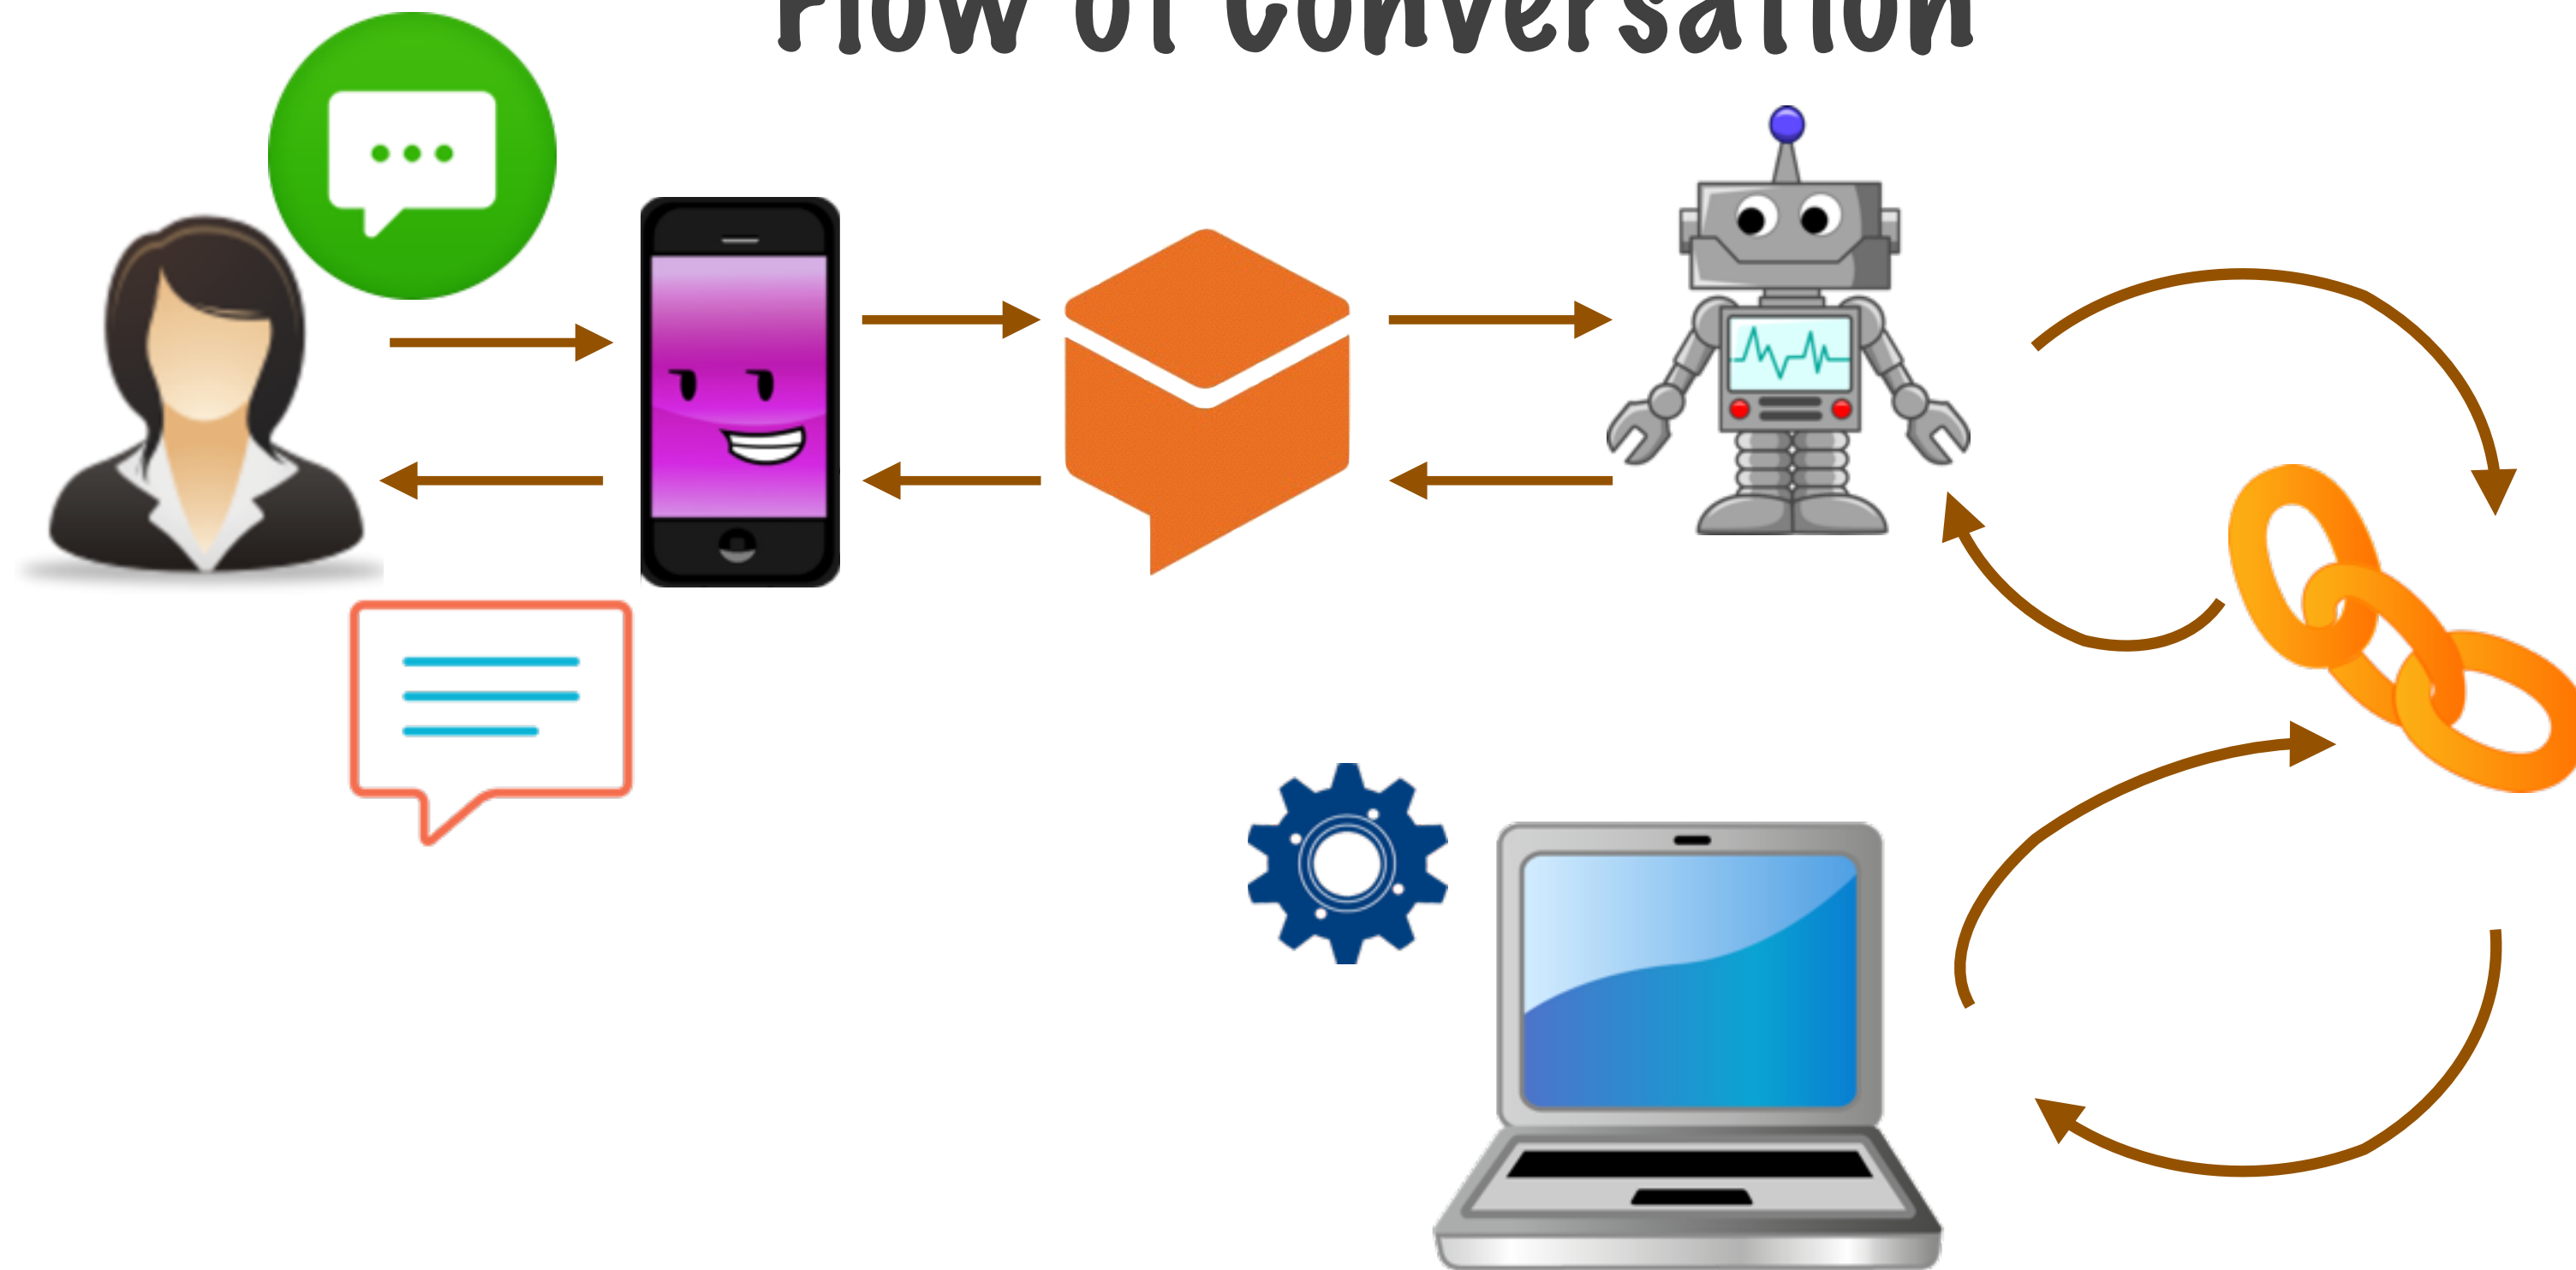

## User says

Training data for NLP ML models

“Hey! Get me a sedan for tomorrow”

**Agents**

# Flow of Conversation

# Agent

A module which incorporates Natural Language Processing to understand what the user meant

# Agent

Agents **manage conversation flow** with  
the user using intents, entities, contexts  
and other building blocks

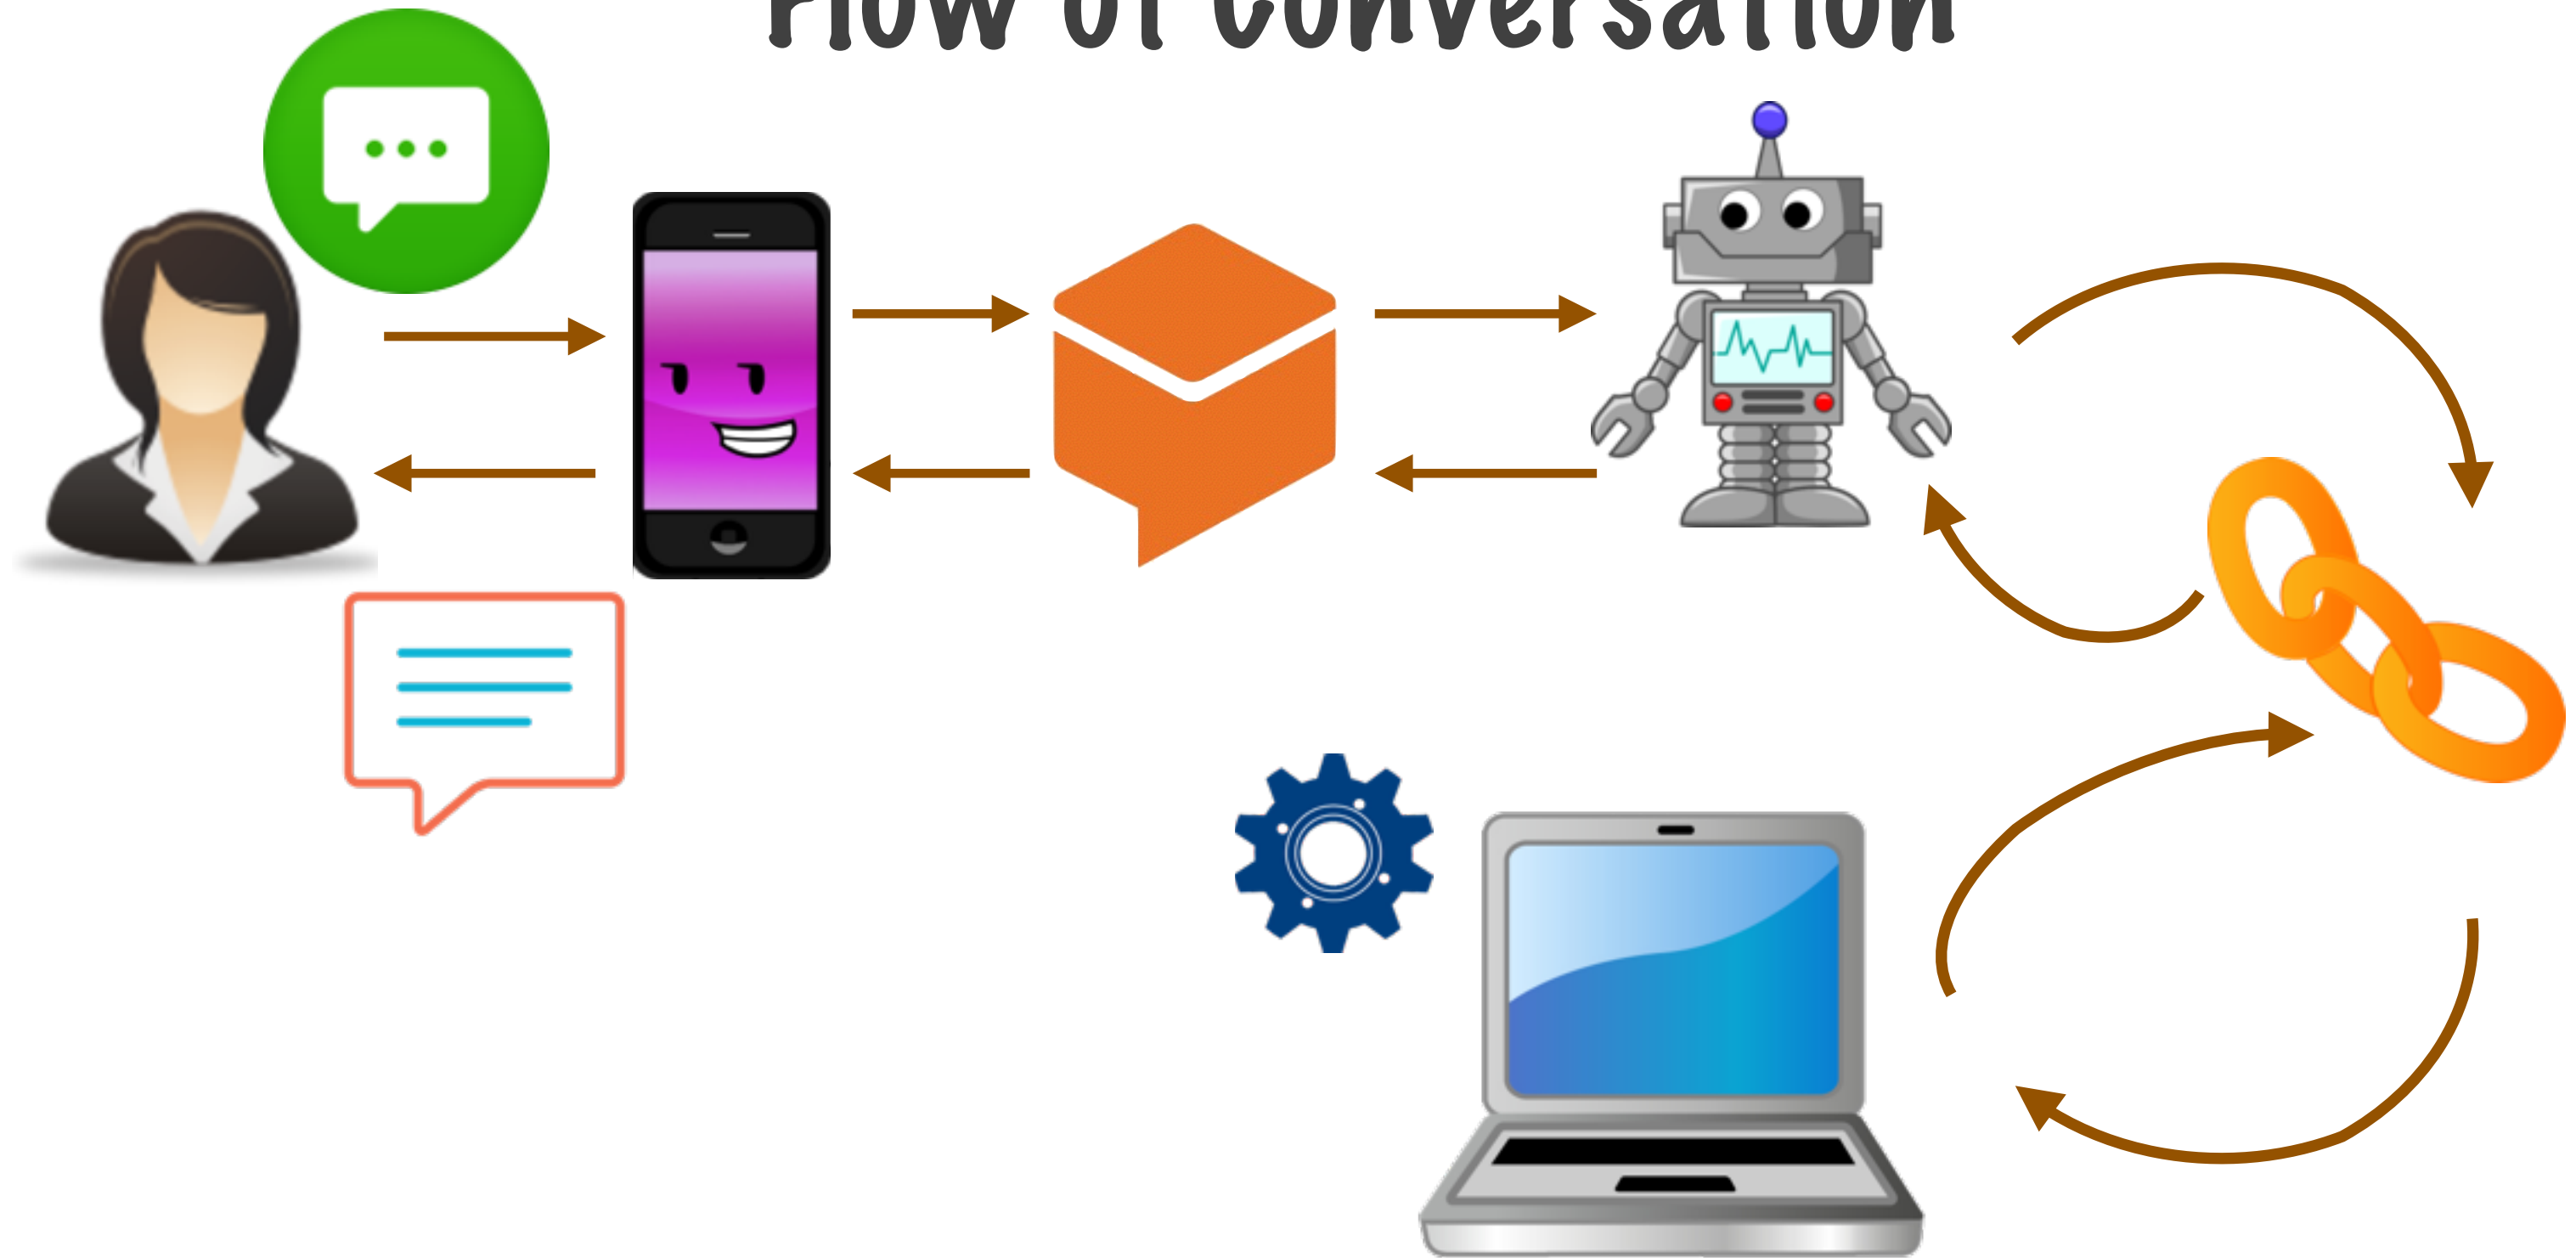

# Demo

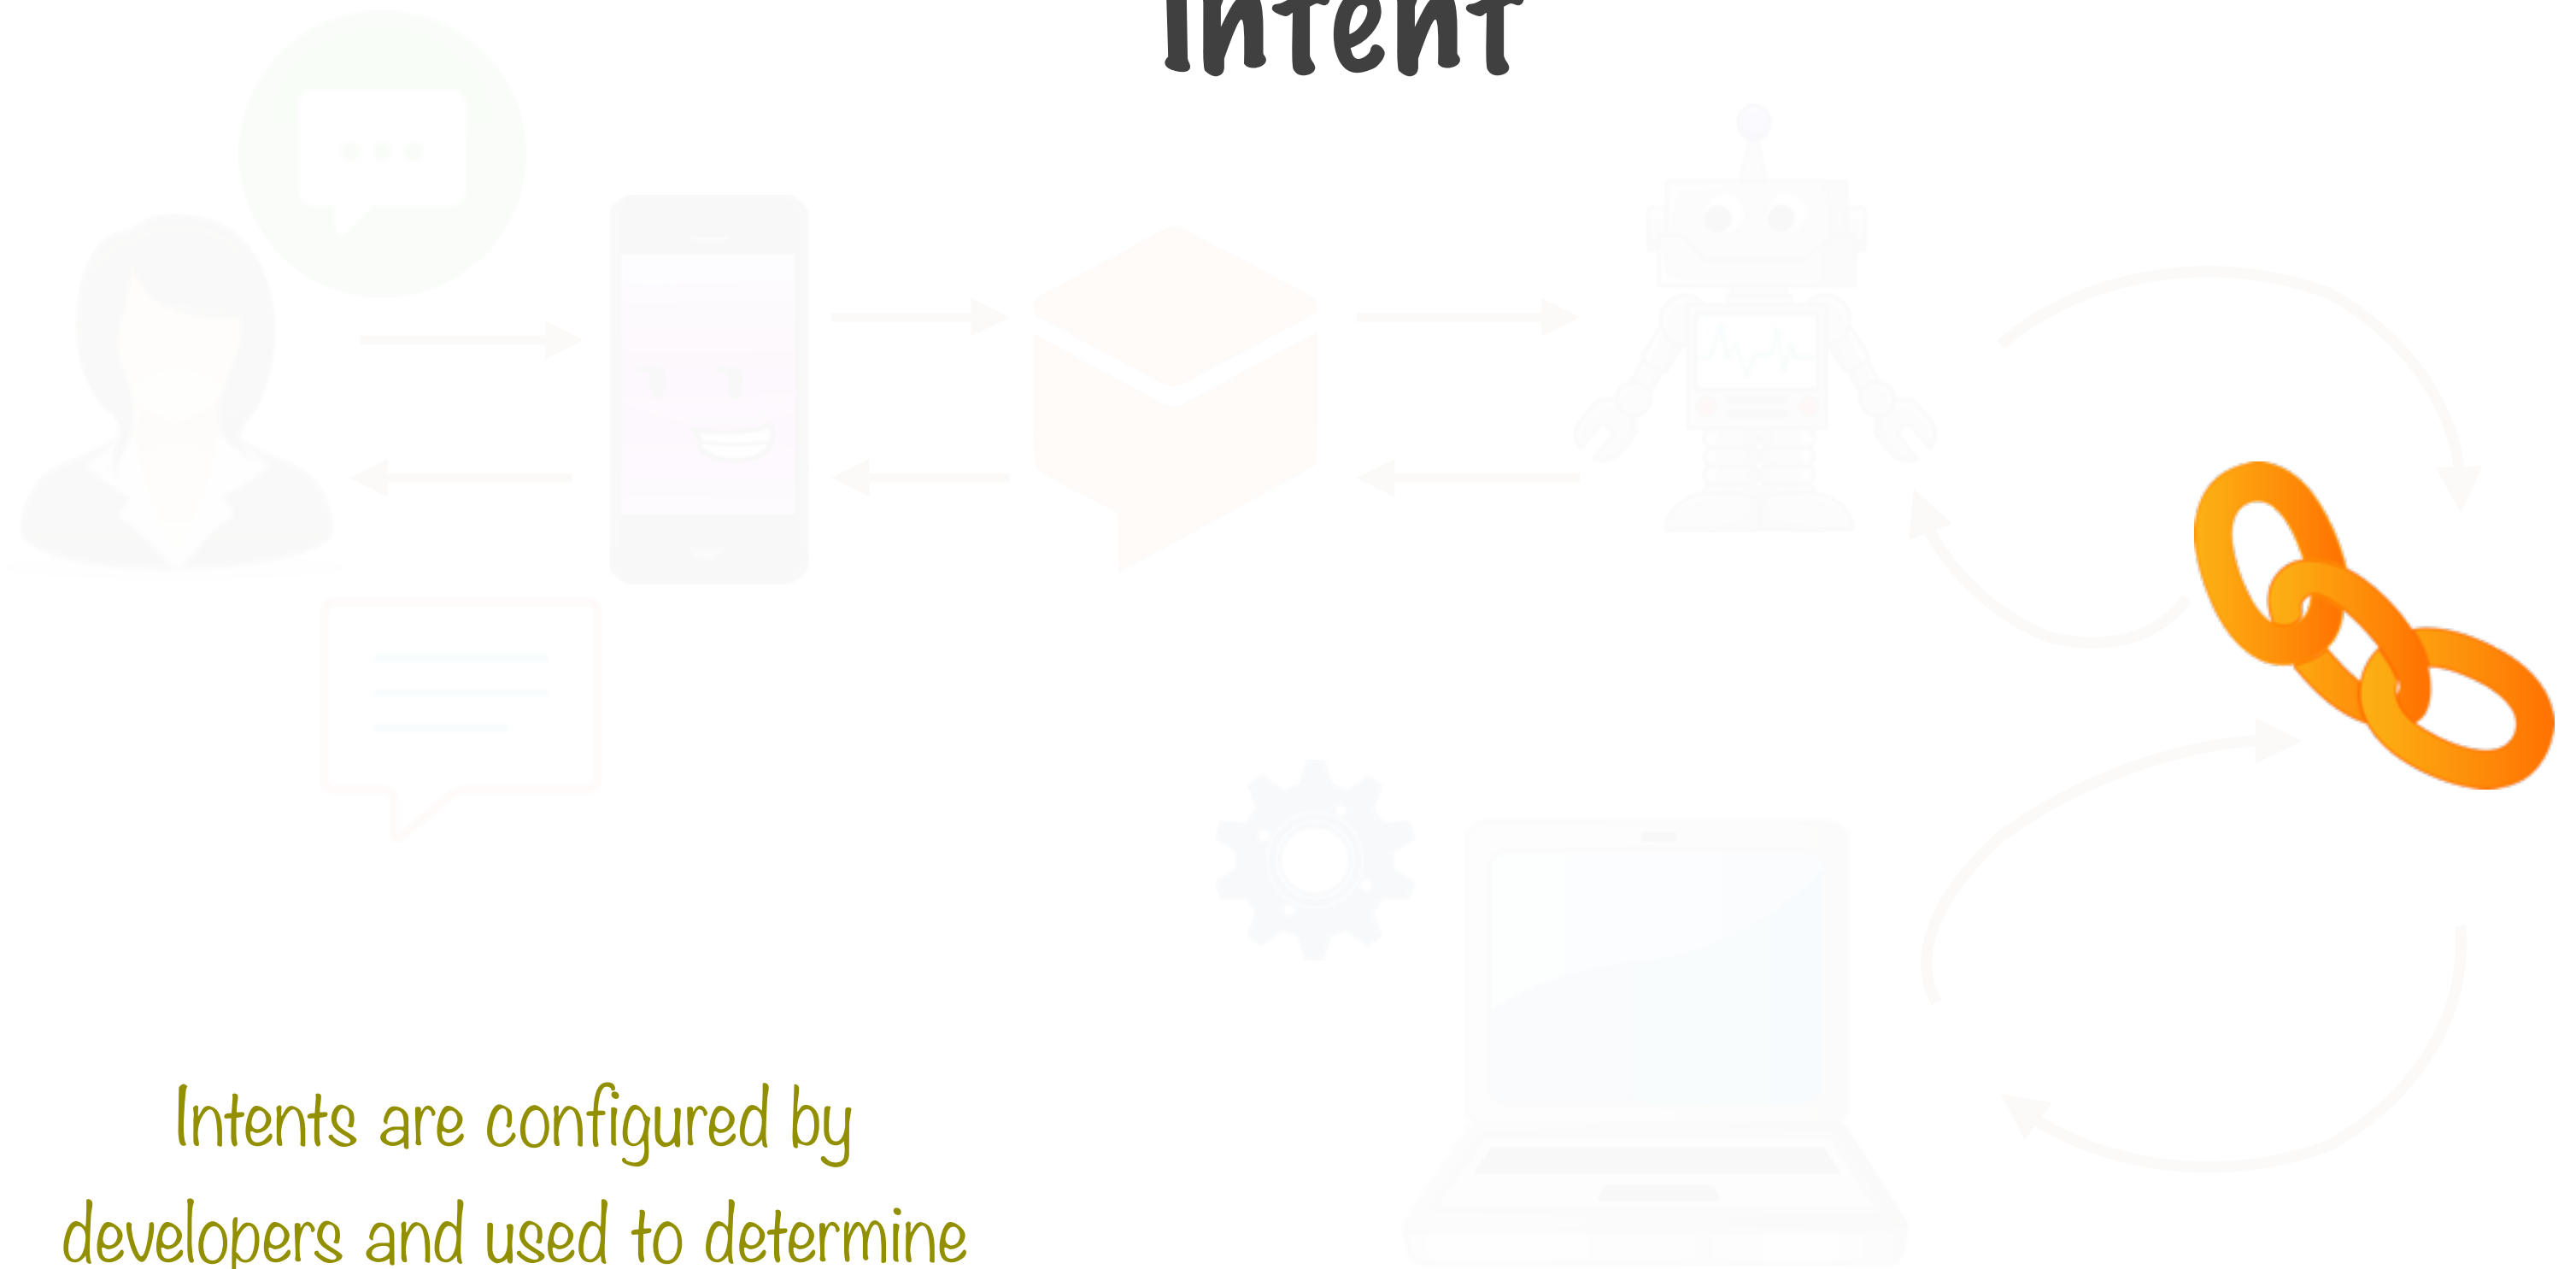

Build an agent which helps plan business trips

**Intents**

# Flow of Conversation

# Intent

Intents are configured by  
developers and used to determine  
the action taken by code

**Intent maps what a user says and what  
your software should execute**

# Default Intents

## Welcome

Greet the user, exchange pleasantries (partially configured)

## Fallback

Default or fall through intent when no others match (fully configured)

# Intent Sections

User says

Action

Response

Context

# Custom Intents

BookRooms

BookCars

**Intents**

# Manage Conversation flow in DialogFlow chatbots

## Contexts & Follow-ups

Contexts represent the current context of a user's request.

"Get me more of that?"

## Non-Linear Dialogs

May have several branches, depending on users' answers

A customer satisfaction survey for a hotel

## Linear Dialogs

Collect the information necessary to complete the required action.

Slot filling using required parameters and prompts

# A Conversation

Book a room for me please

Which city do you plan to visit?

Bangalore

What date should I book for?

This Friday

Any room preference?

A  
double room

# Slots to be Filled

Book a room for me please

Which **city** do you plan to visit?

Bangalore

What **date** should I book for?

This Friday

Any **room** preference?

A  
double room

# Parameter values

Book a room for me please

Which city do you plan to visit?

Bangalore

What date should I book for?

This Friday

Any room preference?

A  
double room

Entities are used to extract parameter values from user queries

# Entities

Book a room for me please

Which **city** do you plan to visit?

Bangalore

What **date** should I book for?

This Friday

Any **room** preference?

A  
double room

# Entities

city

date

room

All the information we need in a user query will  
have a corresponding entity

# Type of Data Expected

city

date

room

System entities

Developer entity

# Entities

city

date

room

User entities are those that can be defined at a session level i.e. a user's playlist

# BookRooms Intent

City

Date

Room type

# BookCars Intent

City

Date

Car type

# A Conversation

Book a room for me please

Which city do you plan to visit?

Bangalore

What date should I book for?

This Friday

Any room preference?

A  
double room

# Prompts

Book a room for me please

Which city do you plan to visit?

Bangalore

What date should I book for?

This Friday

Any room preference?

A  
double room

# Linear Dialogs

# A Conversation

Book a room for me please

Which city do you plan to visit?

Bangalore

What date should I book for?

This Friday

Any room preference?

A  
double room

# A Conversation

This dialog is entirely  
configured within a single  
intent

Book a room for me please

Which city do you plan to visit?

Bangalore

What date should I book for?

This Friday

Any room preference?

A  
double room

**Collect information required to complete  
the action**

**May invoke one or more intents**

# A Conversation

Book a queen room for me in Bangalore  
tomorrow

Done.  
Room booked!

Book a car too

....

# A Conversation

Book a queen room for me in Bangalore  
tomorrow

BookRooms  
intent

Done.  
Room booked!

Book a car too

BookCars  
intent

....

# Context

These are not 2 separate conversations - the car booking is an *extension* of the rooms conversation

# Context

Information relevant to the second conversation needs to flow through from the first

# Context

BookRooms

BookCars

Date

# Non-linear Dialog

**Non-linear dialogs branch to the next intent based on responses from the previous intent**

# Customer Satisfaction Survey

Would you like to offer  
feedback on the  
hotel?

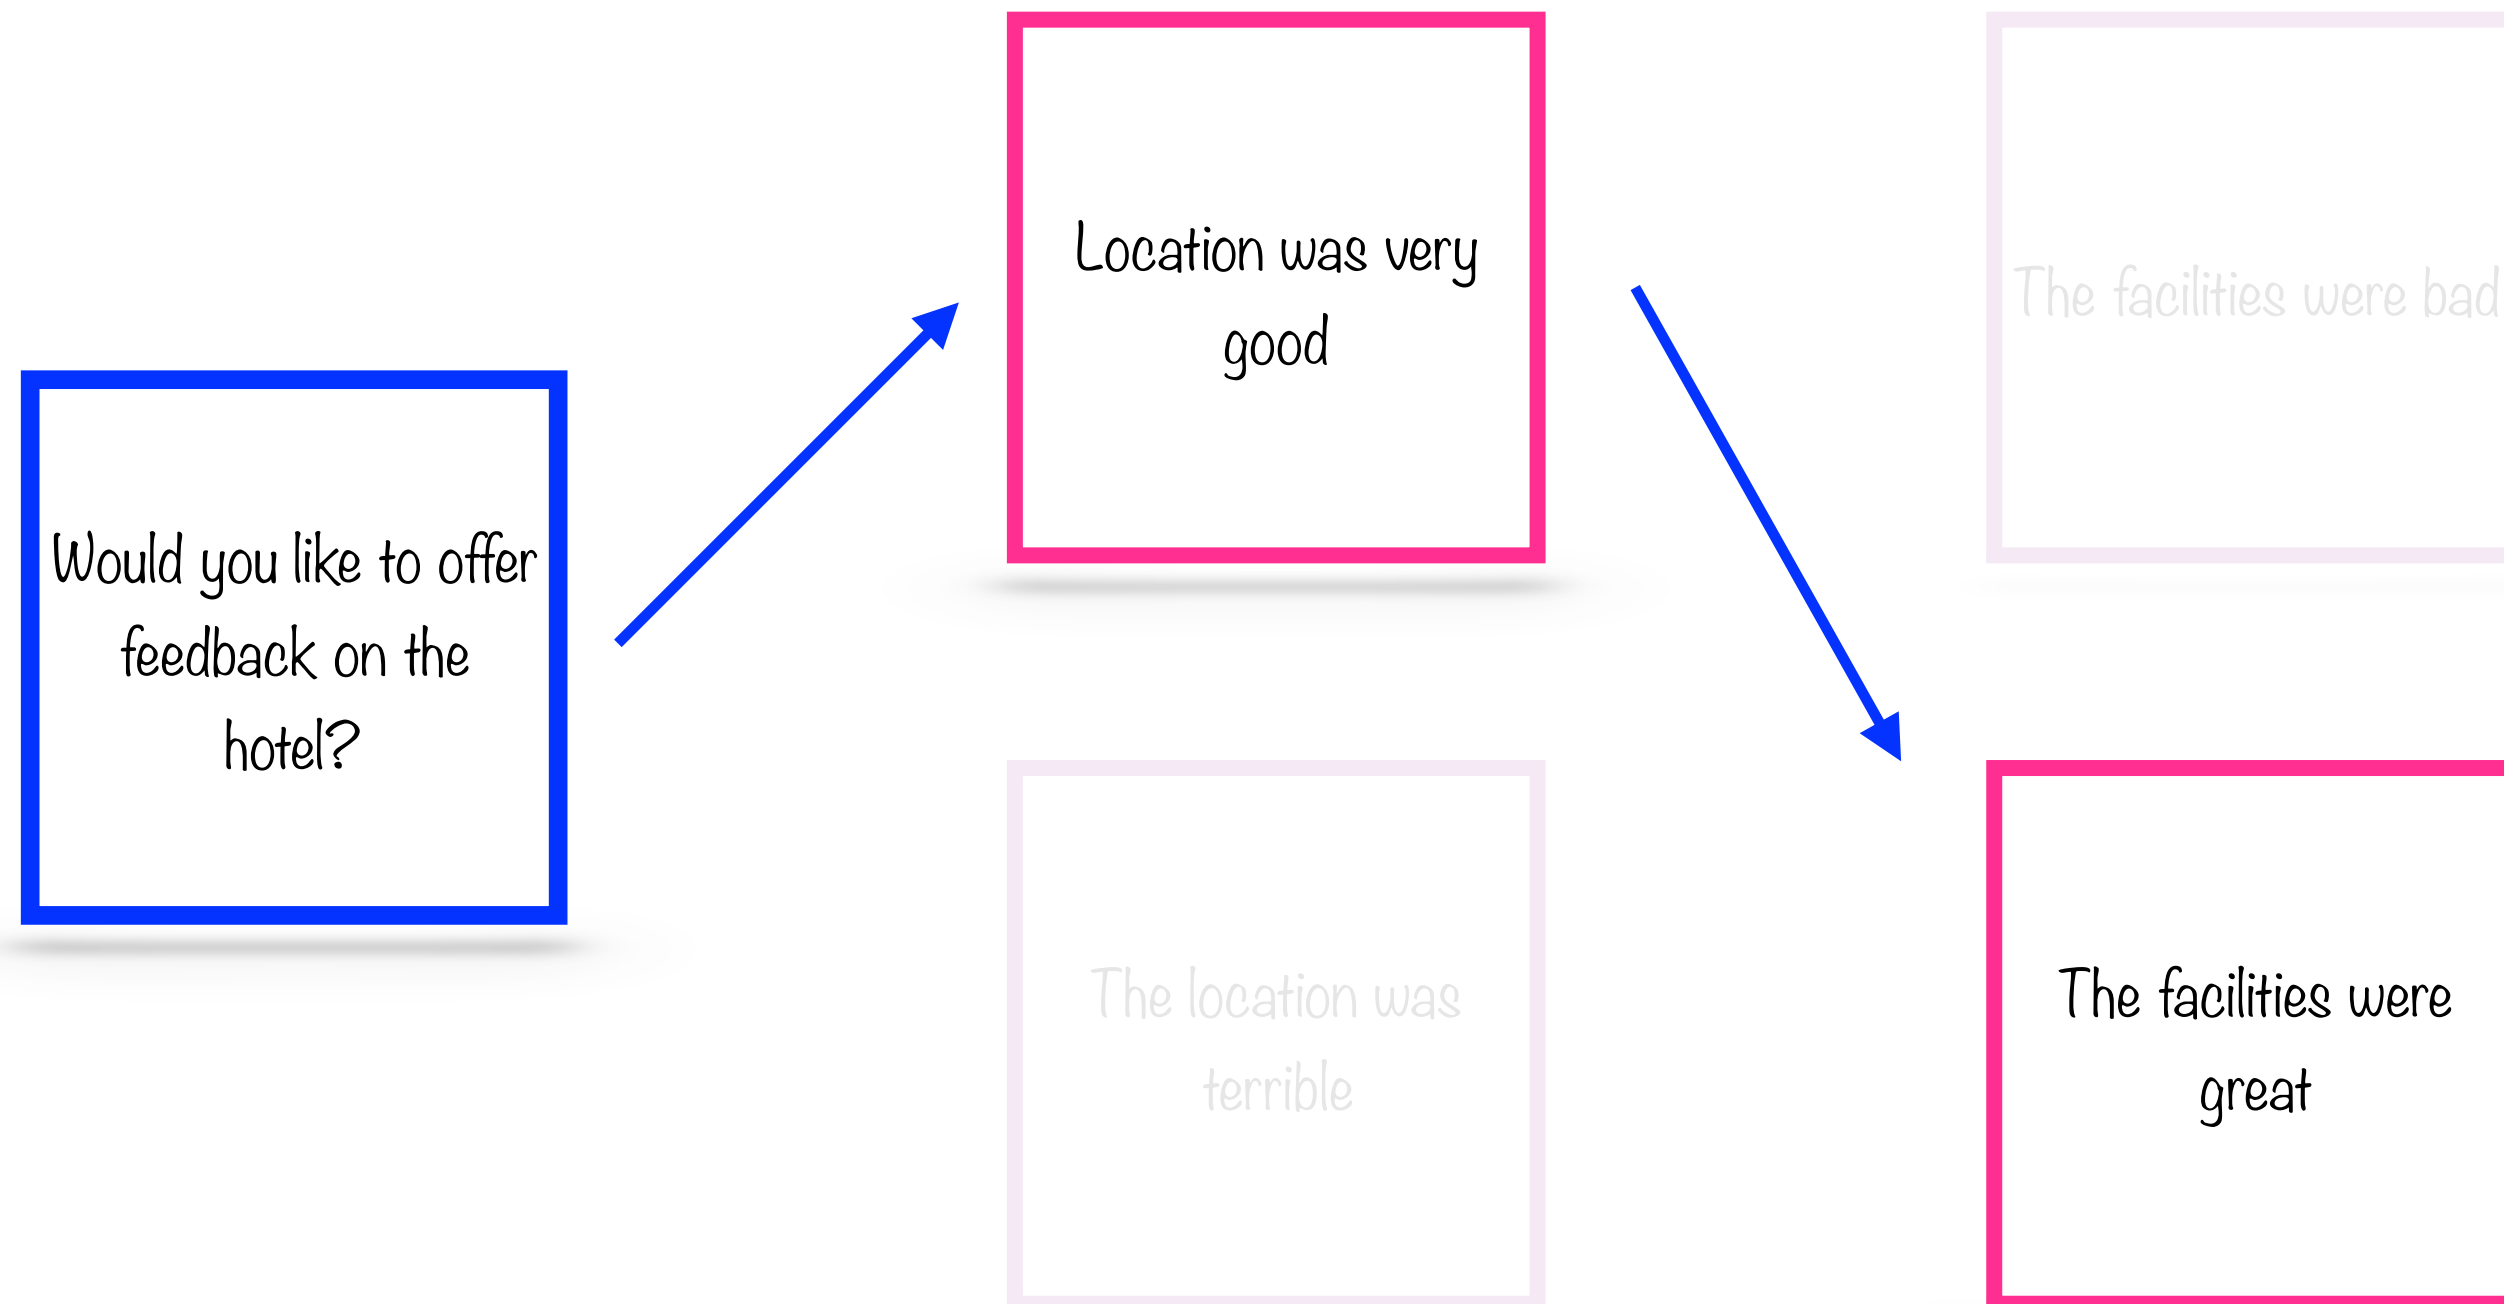

Location was very  
good

The facilities were bad

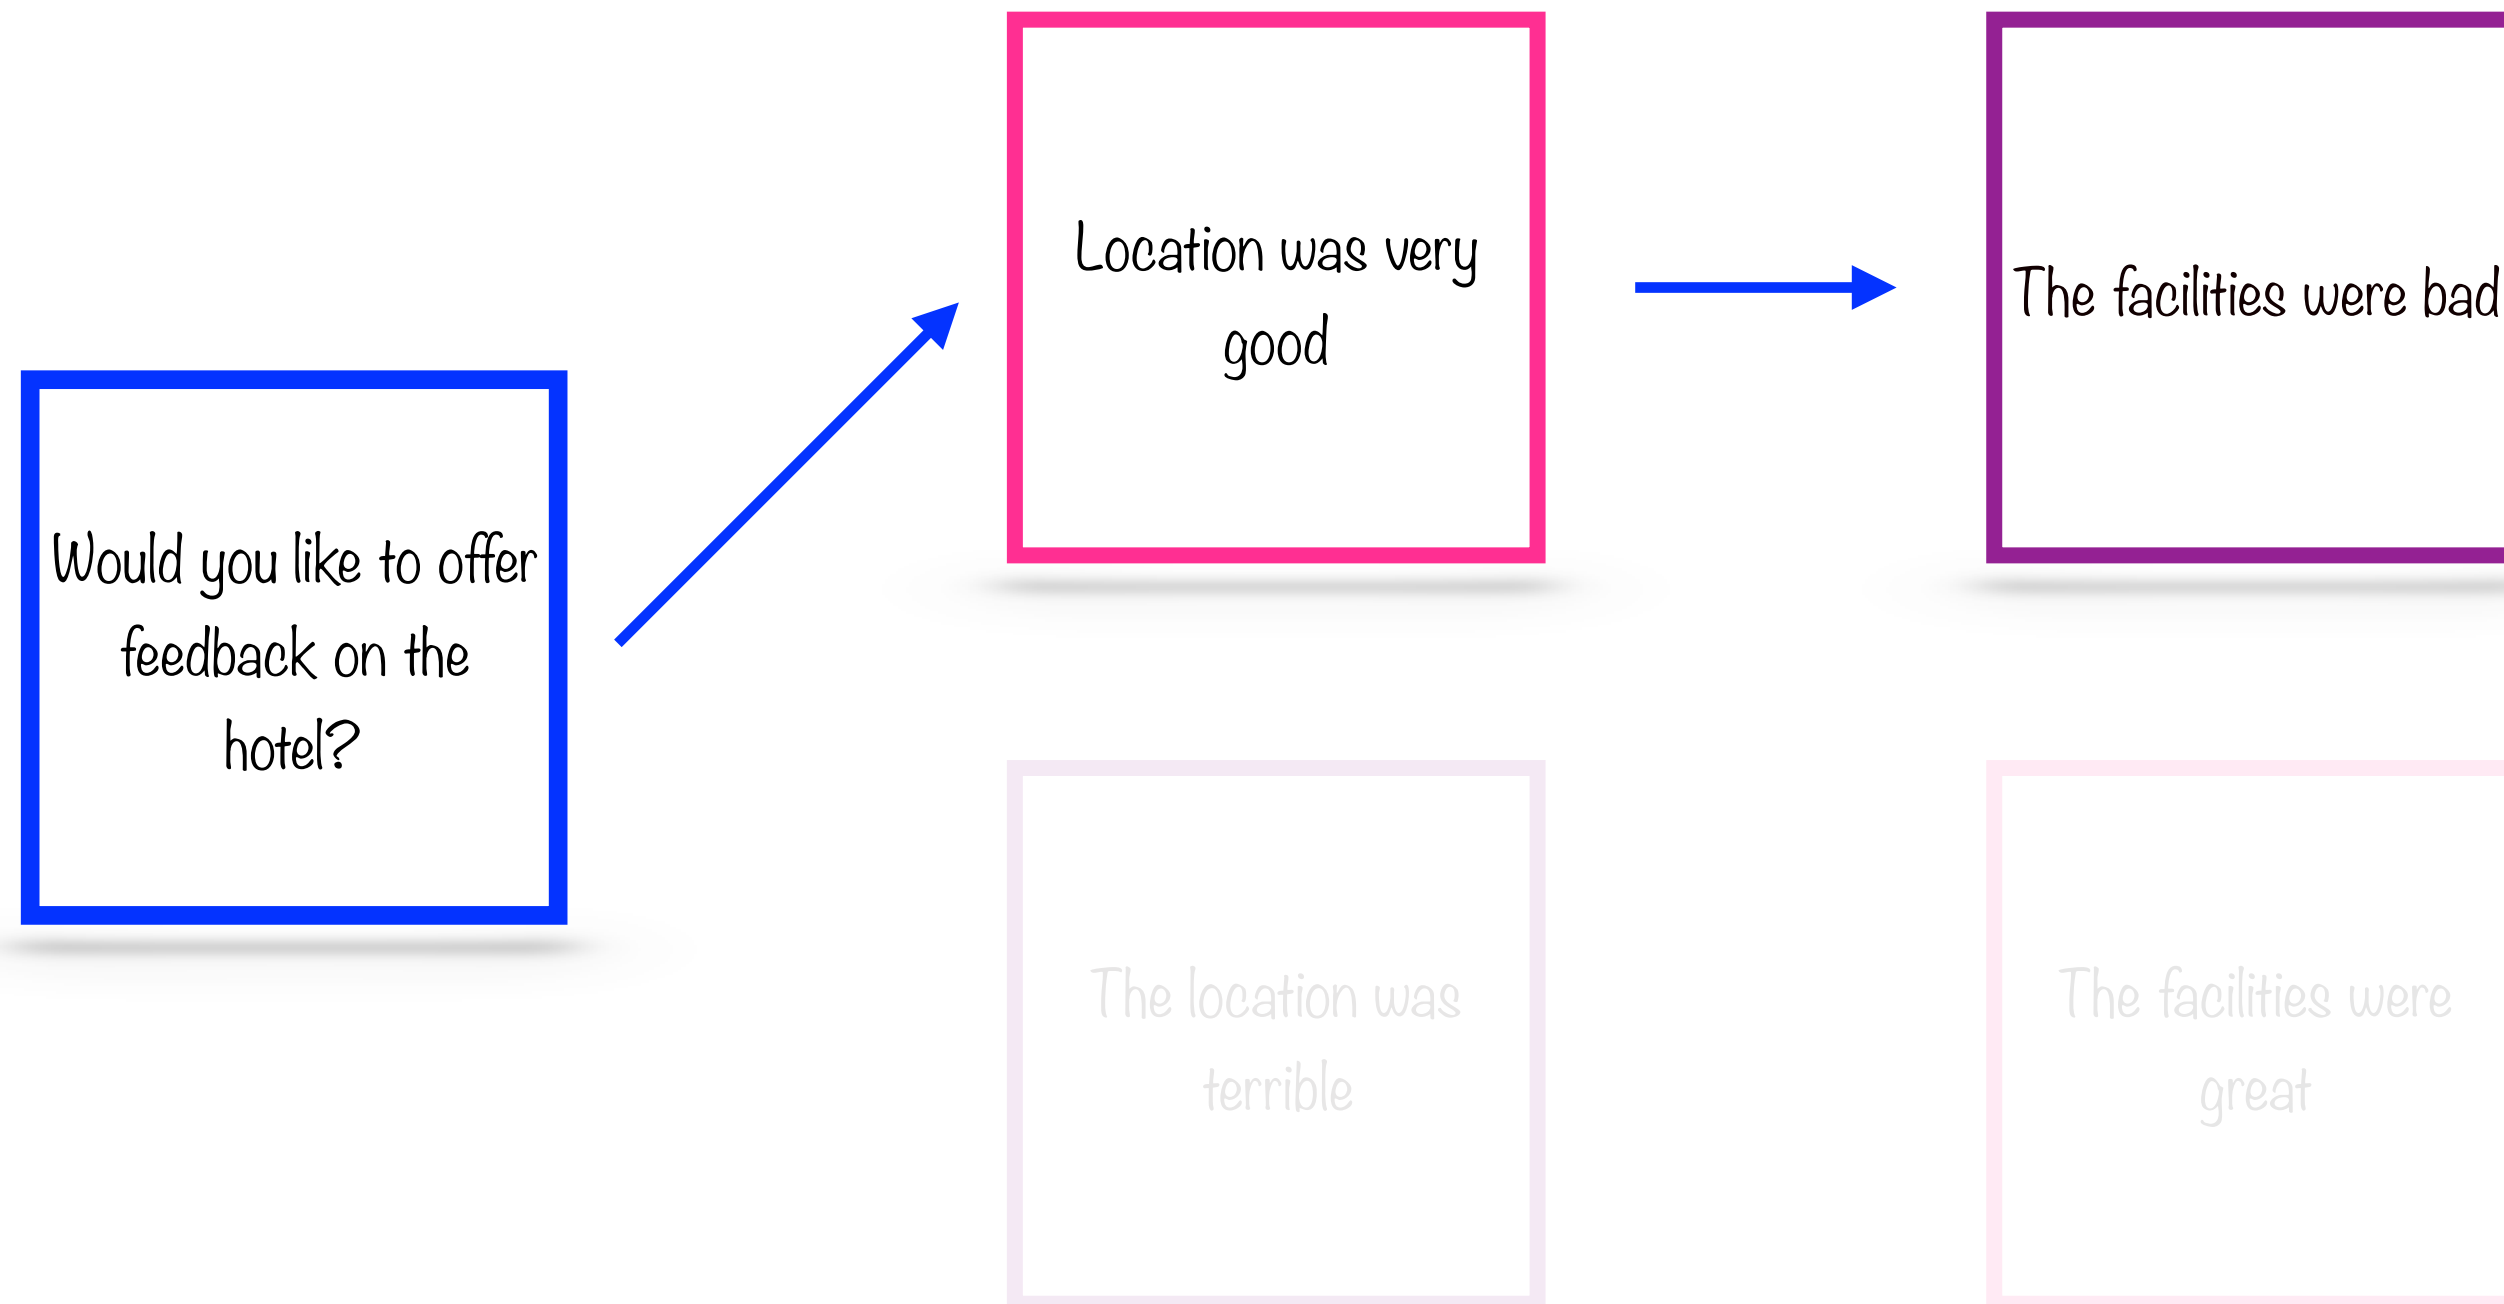

The location was  
terrible

The facilities were  
great

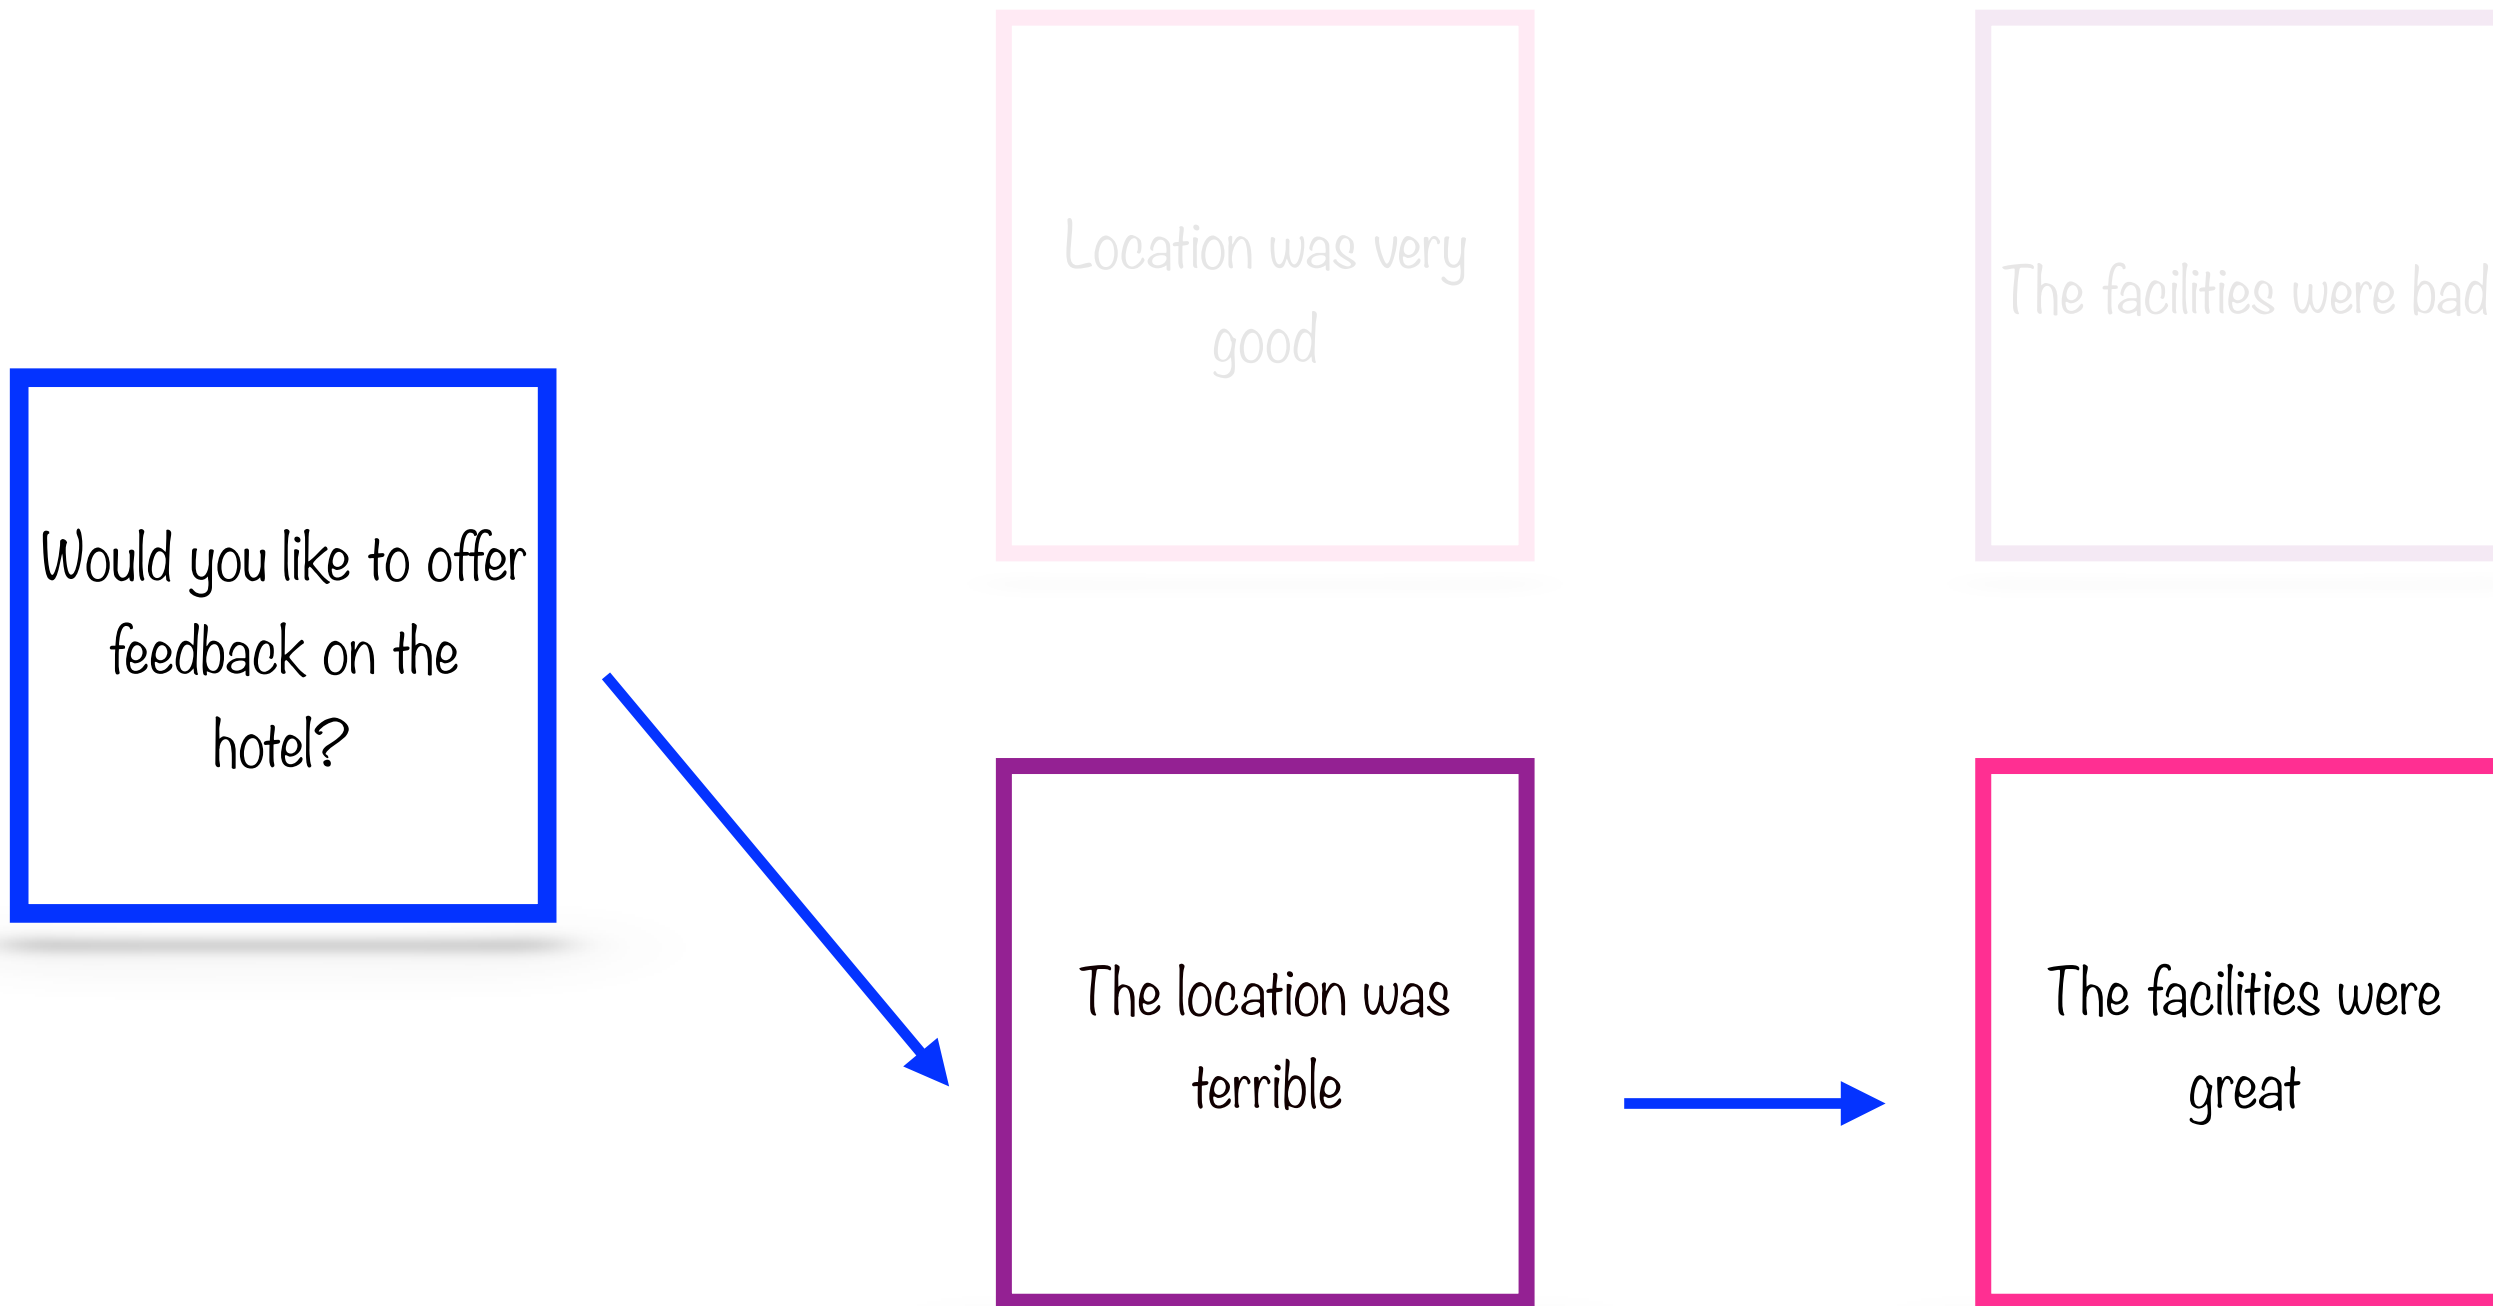

# Customer Satisfaction Survey

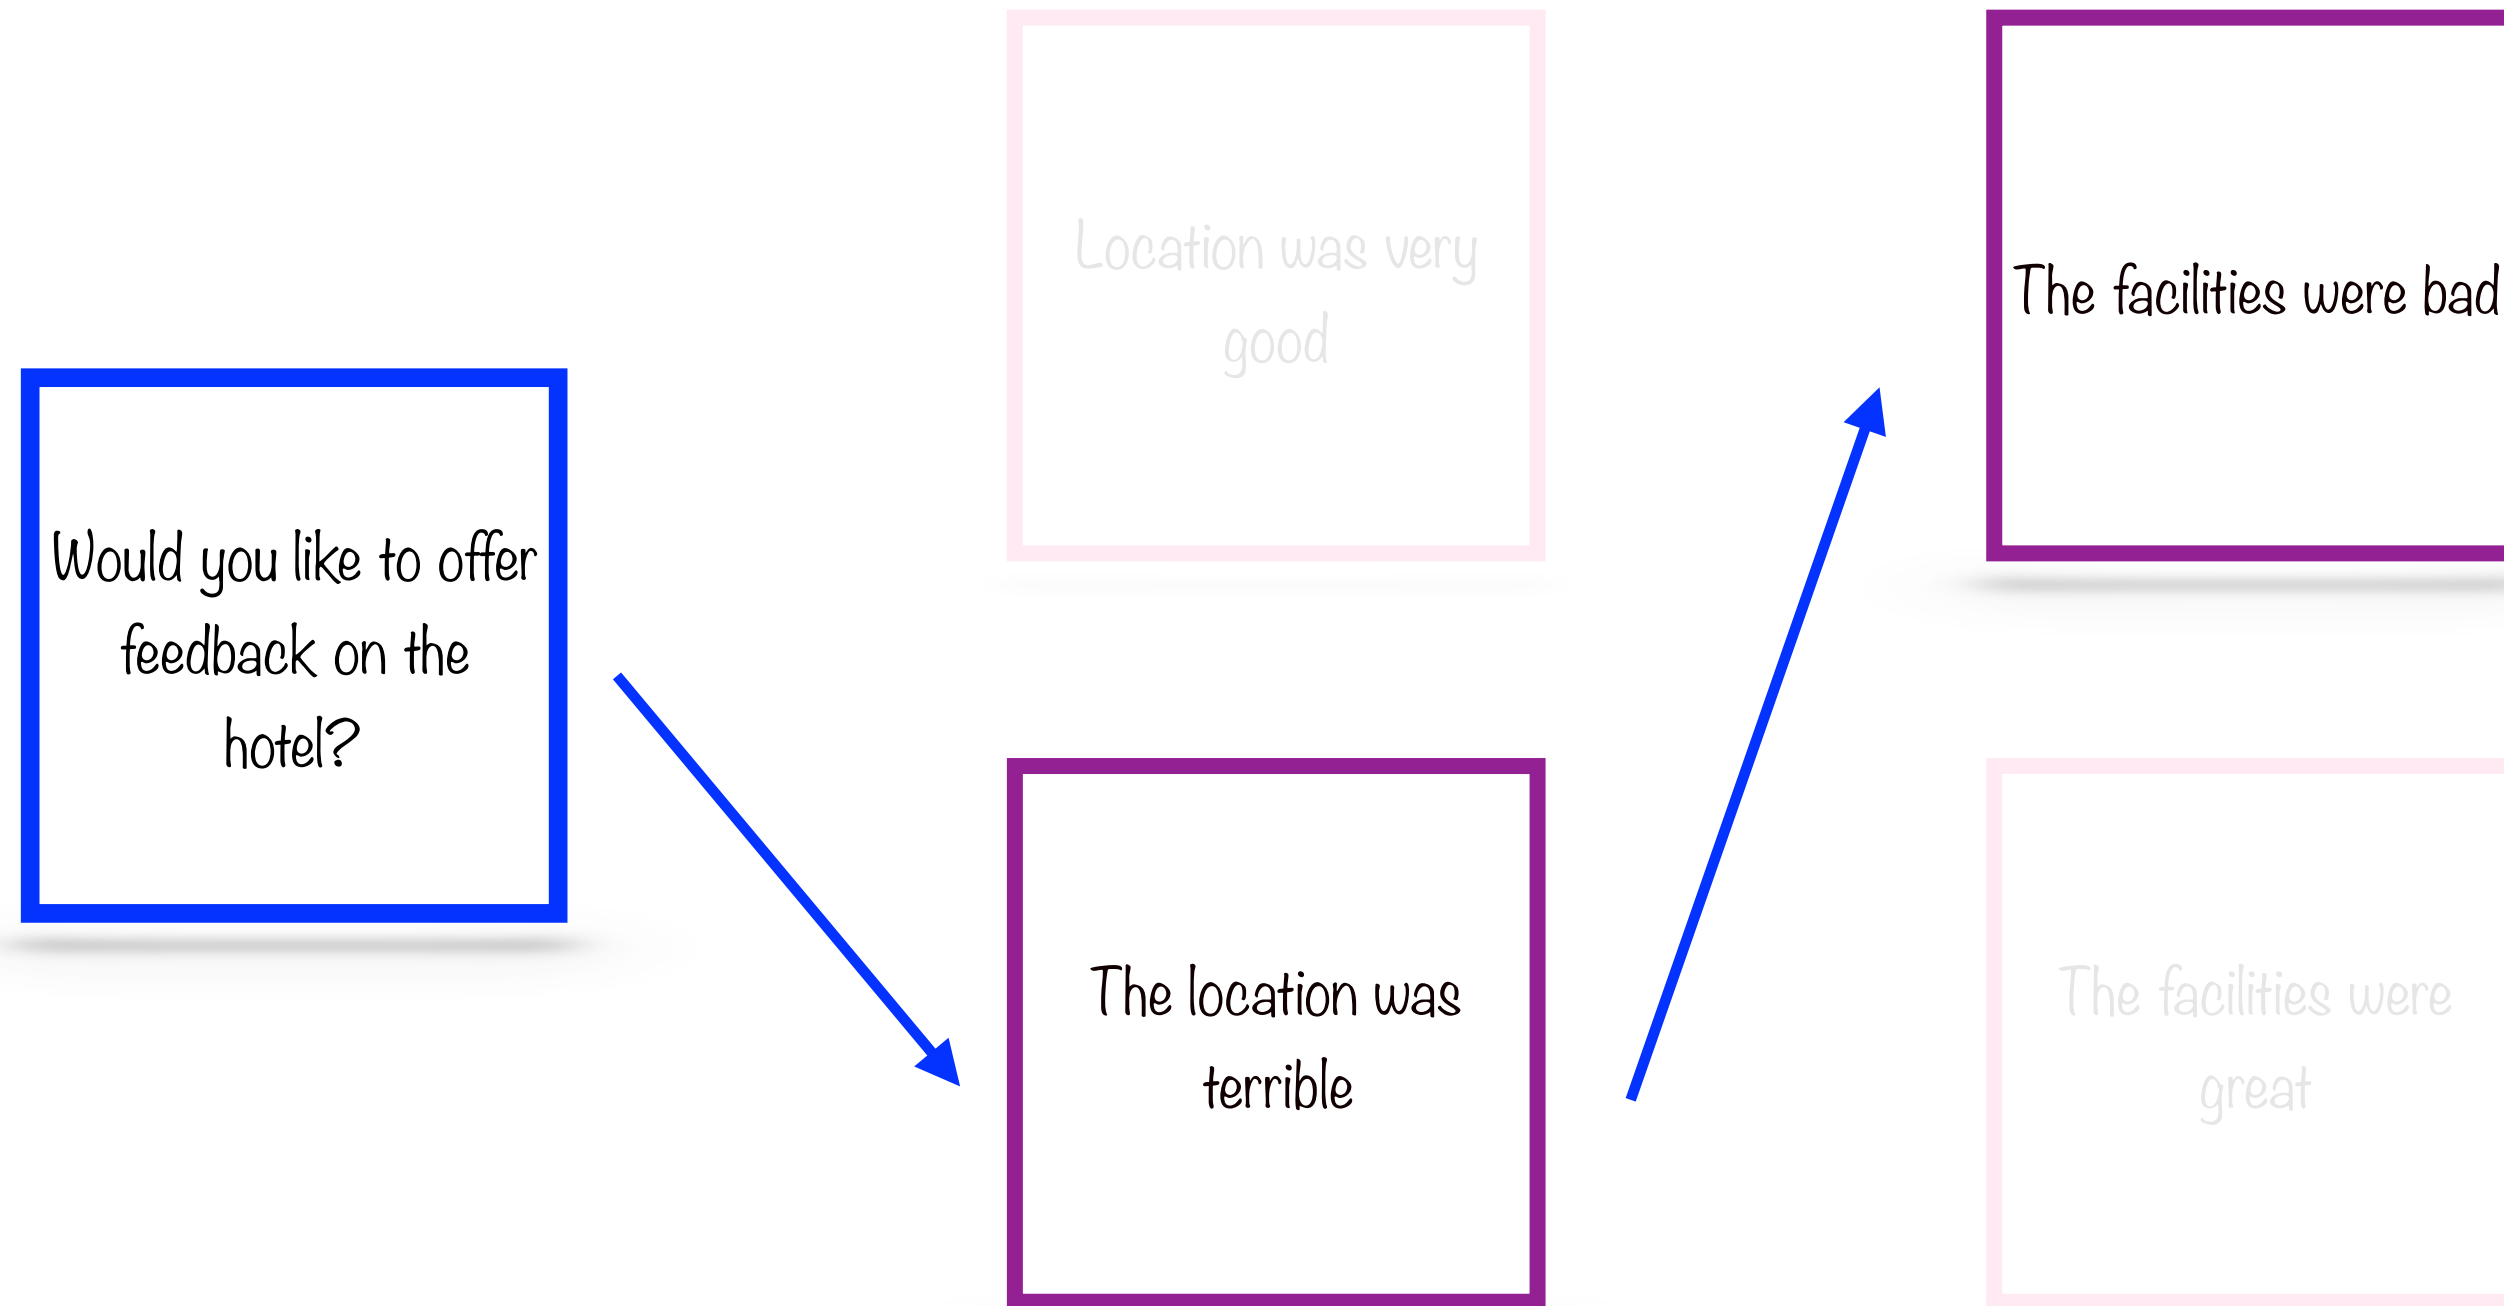

# Customer Satisfaction Survey
